## PREFACE.

THE scope of this book is indicated in § 5. It is intended for beginners, and in writing it, these words of Sir Thomas Elyot have not been forgotten: "Grammer, beinge but an introduction to the understandinge of autors, if it be made to longe or exquisite to the lerner, it in a maner mortifieth his corage: And by that time he cometh to the most swete and pleasant redinge of olde autors, the sparkes of fervent desire of lernynge are extincte with the burdone of grammer, lyke as a lyttell fyre is sone quenched with a great heape of small stickes." — *The Governour*, Cap. X.

Only the essentials, therefore, are treated in this work, which is planned more as a foundation for the study of Modern English grammar, of historical English grammar, and of the principles of English etymology, than as a general introduction to Germanic philology.

The Exercises in translation will, it is believed, furnish all the drill necessary to enable the student to retain the forms and constructions given in the various chapters.

The Selections for Reading relate to the history and literature of King Alfred's day, and are sufficient to give the student a first-hand, though brief, acquaintance with the native style and idiom of Early West Saxon prose in its golden age. Most of the words and constructions contained in them will be already familiar to the student through their intentional employment in the Exercises.

For the inflectional portion of this grammar, recourse

has been had chiefly to Sievers' *Abriss der angelsächsischen Grammatik* (1895). Constant reference has been made also to the same author's earlier and larger *Angelsächsische Grammatik*, translated by Cook. A more sparing use has been made of Cosijn's *Altwestsächsische Grammatik*.

For syntax and illustrative sentences, Dr. J. E. Wülfing's *Syntax in den Werken Alfreds des Grossen, Part I.* (Bonn, 1894) has proved indispensable. Advance sheets of the second part of this great work lead one to believe that when completed the three parts will constitute the most important contribution to the study of English syntax that has yet been made. Old English sentences have also been cited from Sweet's *Anglo-Saxon Reader*, Bright's *Anglo-Saxon Reader*, and Cook's *First Book in Old English*.

The short chapter on the 'Order of Words' has been condensed from my *Order of Words in Anglo-Saxon Prose* (Publications of the Modern Language Association of America, New Series, Vol. I, No. 2).

Though assuming sole responsibility for everything contained in this book, I take pleasure in acknowledging the kind and efficient assistance that has been so generously given me in its preparation. To none do I owe more than to Dr. J. E. Wülfing, of the University of Bonn; Prof. James A. Harrison, of the University of Virginia; Prof. W. S. Currell, of Washington and Lee University; Prof. J. Douglas Bruce, of Bryn Mawr College; and Prof. L. M. Harris, of the University of Indiana. They have each rendered material aid, not only in the tedious task of detecting typographical errors in the proof-sheets, but by the valuable criticisms and suggestions which they have made as this work was passing through the press.

## PREFACE TO THE SECOND EDITION.

IN preparing this enlarged edition, a few minor errors in the first edition have been corrected and a few sentences added. The chief difference between the two editions, however, consists in the introduction of more reading matter and the consequent exposition of Old English meter. Both changes have been made at the persistent request of teachers and students of Old English.

Uniformity of treatment has been studiously preserved in the new material and the old, the emphasis in both being placed on syntax and upon the affinities that Old English shares with Modern English.

Many obligations have been incurred in preparing this augmented edition. I have again to thank Dr. J. E. Wül-  
fing, Prof. James A. Harrison, Prof. W. S. Currell, and Prof. J. Douglas Bruce. To the scholarly criticisms also of Prof. J. M. Hart, of Cornell; Prof. Frank Jewett Mather, Jr., of Williams College; and Prof. Frederick Tupper, Jr., of the University of Vermont, I am indebted for aid as generously given as it is genuinely appreciated.

## PREFACE TO THE FOURTH EDITION.

AMONG those who have kindly aided in making this edition free from error, I wish to thank especially my friend Dr. John M. McBryde, Jr., of Hollins Institute, Virginia.

# OLD ENGLISH GRAMMAR AND EXERCISE BOOK.

## PART I.

### INTRODUCTION.

#### CHAPTER I.

##### HISTORY.

1. The history of the English language falls naturally into three periods; but these periods blend into one another so gradually that too much significance must not be attached to the exact dates which scholars, chiefly for convenience of treatment, have assigned as their limits. Our language, it is true, has undergone many and great changes; but its continuity has never been broken, and its individuality has never been lost.

2. The first of these periods is that of OLD ENGLISH, or ANGLO-SAXON,<sup>1</sup> commonly known as the period of *full*

---

<sup>1</sup> This unfortunate nomenclature is due to the term *Angli Saxones*, which Latin writers used as a designation for the English Saxons as distinguished from the continental or Old Saxons. But Alfred and Ælfric both use the term *Englisc*, not Anglo-Saxon. The Angles spread over Northumbria and Mercia, far outnumbering the other tribes. Thus *Englisc* (= *Angel* + *isc*) became the general name for the language spoken.

*inflections.* *E.g.* **stān-as**, *stones*; **car-u**, *care*; **will-a**, *will*; **bind-an**, *to bind*; **help-að** (= **ath**), *they help*.

It extends from the arrival of the English in Great Britain to about one hundred years after the Norman Conquest, —from A.D. 449 to 1150; but there are no literary remains of the earlier centuries of this period. There were four<sup>1</sup> distinct dialects spoken at this time. These were the Northumbrian, spoken north of the river Humber; the Mercian, spoken in the midland region between the Humber and the Thames; the West Saxon, spoken south and west of the Thames; and the Kentish, spoken in the neighborhood of Canterbury. Of these dialects, Modern English is most nearly akin to the Mercian; but the best known of them is the West Saxon. It was in the West Saxon dialect that King Alfred (849-901) wrote and spoke. His writings belong to the period of Early West Saxon as distinguished from the period of Late West Saxon, the latter being best represented in the writings of Abbot Ælfric (955?–1025?).

**3.** The second period is that of MIDDLE ENGLISH, or the period of *leveled inflections*, the dominant vowel of the inflections being *e*. *E.g.* **ston-es**, **car-e**, **will-e**, **bind-en** (or **bind-e**), **help-eth**, each being, as in the earlier period, a dissyllable.

The Middle English period extends from A.D. 1150 to 1500. Its greatest representatives are Chaucer (1340–1400) in poetry and Wiclif (1324–1384) in prose. There were three prominent dialects during this period: the Northern, corresponding to the older Northumbrian; the Midland

---

<sup>1</sup> As small as England is, there are six distinct dialects spoken in her borders to-day. Of these the Yorkshire dialect is, perhaps, the most peculiar. It preserves many Northumbrian survivals. See Tennyson's *Northern Farmer*.

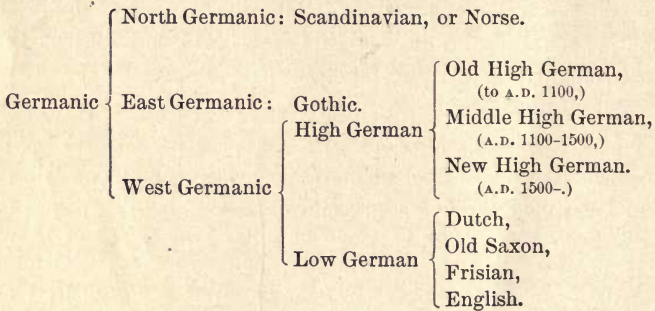

(divided into East Midland and West Midland), corresponding to the Mercian; and the Southern, corresponding to the West Saxon and Kentish. London, situated in East Midland territory, had become the dominant speech center; and it was this East Midland dialect that both Chaucer and Wiclif employed.

NOTE.— It is a great mistake to think that Chaucer shaped our language from crude materials. His influence was conservative, not plastic. The popularity of his works tended to crystalize and thus to perpetuate the forms of the East Midland dialect, but that dialect was ready to his hand before he began to write. The speech of London was, in Chaucer's time, a mixture of Southern and Midland forms, but the Southern forms (survivals of the West Saxon dialect) had already begun to fall away; and this they continued to do, so that "Chaucer's language," as Dr. Murray says, "is more Southern than standard English eventually became." See also Morsbach, *Ueber den Ursprung der neuenglischen Schriftsprache* (1888).

4. The last period is that of MODERN ENGLISH, or the period of *lost inflections*. *E.g. stones, care, will, bind, help*, each being a monosyllable. Modern English extends from A.D. 1500 to the present time. It has witnessed comparatively few grammatical changes, but the vocabulary of our language has been vastly increased by additions from the classical languages. Vowels, too, have shifted their values.

5. It is the object of this book to give an elementary knowledge of Early West Saxon, that is, the language of King Alfred. With this knowledge, it will not be difficult for the student to read Late West Saxon, or any other dialect of the Old English period. Such knowledge will also serve as the best introduction to the structure both of Middle English and of Modern English, besides laying a secure foundation for the scientific study of any other Germanic tongue.

NOTE.—The Germanic, or Teutonic, languages constitute a branch of the great Aryan, or Indo-Germanic (known also as the Indo-European) group. They are subdivided as follows:

## CHAPTER II.

### SOUNDS.

#### Vowels and Diphthongs.

6. The long vowels and diphthongs will in this book be designated by the macron ( ¯ ). Vowel length should in every case be associated by the student with each word learned: quantity alone sometimes distinguishes words meaning wholly different things: *fōr*, *he went*, *for*, *for*; *gōd*, *good*, *God*, *God*; *mān*, *crime*, *man*, *man*.

Long vowels and diphthongs:

ā as in *father*: *stān*, *a stone*.

ǣ as in *man* (prolonged): *slǣpan*, *to sleep*.

ē as in *they*: *hēr*, *here*.

ī as in *machine*: *mīn*, *mine*.

ō as in *note* (pure, not diphthongal): *bōc*, *book*.

ū as in rule: **tūn**, *town*.

ȳ as in German grün, or English green (with lips rounded):<sup>1</sup> **brȳd**, *bride*.

The diphthongs, long and short, have the stress upon the first vowel. The second vowel is obscured, and represents approximately the sound of *er* in *sooner*, *faster* (= *soon-uh*, *fast-uh*). The long diphthongs ( $\bar{æ}$  is not a diphthong proper) are  $\bar{e}o$ ,  $\bar{i}e$ , and  $\bar{e}a$ . The sound of  $\bar{e}o$  is approximately reproduced in *mayor* (= *mā-uh*); that of  $\bar{i}e$  in the dissyllabic pronunciation of *fear* (= *fē-uh*). But  $\bar{e}a$  =  $\bar{æ}-uh$ . This diphthong is hardly to be distinguished from *ea* in *pear*, *bear*, etc., as pronounced in the southern section of the United States (= *bæ-uh*, *pæ-uh*).

7. The short sounds are nothing more than the long vowels and diphthongs shortened; but the student must at once rid himself of the idea that Modern English *red*, for example, is the shortened form of *reed*, or that *mat* is the shortened form of *mate*. Pronounce these long sounds with increasing rapidity, and *reed* will approach *rid*, while *mate* will approach *met*. The Old English short vowel sounds are:

**a** as in artistic: **habban**, *to have*.

**æ** as in mankind: **dæg**, *day*.

**e, e** as in let: **stelan**, *to steal*, **settan**, *to set*.

**i** as in sit: **hit**, *it*.

**o** as in broad (but shorter): **God**, *God*.

**ƿ** as in not: **lƿmb**, *lamb*.

**u** as in full: **sunu**, *son*.

**y** as in miller (with lips rounded)<sup>1</sup>: **gylden**, *golden*.

---

<sup>1</sup> Vowels are said to be round, or rounded, when the lip-opening is rounded; that is, when the lips are thrust out and puckered as if

NOTE. — The symbol **ę** is known as *umlaut-e* (§ 58). It stands for Germanic *a*, while **e** (without the cedilla) represents Germanic *e*. The symbol **q** is employed only before **m** and **n**. It, too, represents Germanic *a*. But Alfred writes **manig** or **monig**, *many*; **lamb** or **lomb**, *lamb*; **hand** or **hond**, *hand*, etc. The cedilla is an etymological sign added by modern grammarians.

### Consonants.

8. There is little difference between the values of Old English consonants and those of Modern English. The following distinctions, however, require notice :

The digraph **th** is represented in Old English texts by **ð** and **þ**, no consistent distinction being made between them. In the works of Alfred, **ð** (capital, **Ð**) is the more common : **ðās**, *those*; **ðæt**, *that*; **bindeð**, *he binds*.

The consonant **c** had the hard sound of *k*, the latter symbol being rare in West Saxon : **cyning**, *king*; **cwēn**, *queen*; **cūð**, *known*. When followed by a palatal vowel sound, — *e*, *i*, *æ*, *ea*, *eo*, long or short, — a vanishing *y* sound was doubtless interposed (*cf.* dialectic *k<sup>y</sup>ind* for *kind*). In Modern English the combination has passed into *ch* : **cealc**, *chalk*; **cīdan**, *to chide*; **læce**, *leech*; **cild**, *child*; **cēowan**, *to chew*. This change (*c > ch*) is known as Palatalization. The letter **g**, pronounced as in Modern English *gun*, has also a palatal value before the palatal vowels (*cf.* dialectic *g<sup>y</sup>irl* for *girl*).

The combination **cg**, which frequently stands for **gg**, had probably the sound of *dge* in Modern English *edge* : **ęcg**, *edge*; **sęcgan**, *to say*; **brycg**, *bridge*.

---

preparing to pronounce *w*. Thus *o* and *u* are round vowels: add *-ing* to each, and phonetically you have added *-wing*. *E.g.* *go<sup>w</sup>ing*, *su<sup>w</sup>ing*.

Initial **h** is sounded as in Modern English: **habban**, *to have*; **hālgā**, *saint*. When closing a syllable it has the sound of German *ch*: **slōh**, *he slew*; **hēah**, *high*; **ḡurh**, *through*.

9. An important distinction is that between voiced (or sonant) and voiceless (or surd) consonants.<sup>1</sup> In Old English they are as follows:

| VOICED.                            | VOICELESS.                       |
|------------------------------------|----------------------------------|
| <b>g</b>                           | <b>h, c</b>                      |
| <b>d</b>                           | <b>t</b>                         |
| <b>ḡ, þ</b> (as in <i>though</i> ) | <b>ḥ, þ</b> (as in <i>thin</i> ) |
| <b>b</b>                           | <b>p</b>                         |
| <b>f</b> (= <i>v</i> )             | <b>f</b>                         |
| <b>s</b> (= <i>z</i> )             | <b>s</b>                         |

It is evident, therefore, that **ḡ** (**þ**), **f**, and **s** have double values in Old English. If voiced, they are equivalent to *th* (in *though*), *v*, and *z*. Otherwise, they are pronounced as *th* (in *thin*), *f* (in *fin*), and *s* (in *sin*). The syllabic environment will usually compel the student to give these letters their proper values. When occurring between vowels, they are always voiced: **ōḡer**, *other*; **ofer**, *over*; **rīsan**, *to rise*.

NOTE.—The general rule in Old English, as in Modern English, is, that voiced consonants have a special affinity for other voiced consonants, and voiceless for voiceless. This is the law of Assimilation. Thus when *de* is added to form the preterit of a verb whose stem

<sup>1</sup> A little practice will enable the student to see the appropriateness of calling these consonants voiced and voiceless. Try to pronounce a voiced consonant, — *d* in *den*, for example, but without the assistance of *en*, — and there will be heard a gurgle, or *vocal* murmur. But in *t*, of *ten*, there is no sound at all, but only a feeling of tension in the organs.

ends in a voiceless consonant, the *d* is unvoiced, or assimilated, to *t* **seġttan**, to *set*, **seġtte** (but **treġddan**, to *tread*, has **treġdde**); **slæpan**, to *sleep*, **slæpte**; **drencan**, to *drench*, **drencete**; **cyssan**, to *kiss*, **cyste**. See § 126, Note 1.

### Syllables.

**10.** A syllable is usually a vowel, either alone or in combination with consonants, uttered with a single impulse of stress; but certain consonants may form syllables: *oven* (= *ov-n*), *battle* (= *bæt-l*); (cf. also the vulgar pronunciation of *elm*).

A syllable may be (1) weak or strong, (2) open or closed, (3) long or short.

(1) A weak syllable receives a light stress. Its vowel sound is often different from that of the corresponding strong, or stressed, syllable. Cf. weak and strong *my* in "I want my *lárge* hat" and "I want *mý* hat."

(2) An open syllable ends in a vowel or diphthong: **dē-man**, to *deem*; **ðū**, *thou*; **sca-can**, to *shake*; **dæ-ges**, *by day*. A closed syllable ends in one or more consonants: **ðing**, *thing*; **gōd**, *good*; **glæd**, *glad*.

(3) A syllable is long (*a*) if it contains a long vowel or a long diphthong: **drī-fan**, to *drive*; **lū-can**, to *lock*; **slæ-pan**, to *sleep*; **cēo-san**, to *choose*; (*b*) if its vowel or diphthong is followed by more than one consonant: **cræft**, *strength*; **heard**, *hard*; **lib-ban**, to *live*; **feal-lan**,

---

<sup>1</sup> Taken separately, every syllable ending in a single consonant is long. It may be said, therefore, that all closed syllables are long; but in the natural flow of language, the single final consonant of a syllable so often blends with a following initial vowel, the syllable thus becoming open and short, that such syllables are not recognized as prevalingly long. Cf. Modern English *at all* (= *a-tall*).

to fall. Otherwise, the syllable is short: *ðe*, which; *be-ran*, to bear; *ðæt*, that; *gie-fan*, to give.

NOTE 1. — A single consonant belongs to the following syllable: *hā-lig*, holy (not *hāl-ig*); *wri-tan*, to write; *fæ-der*, father.

NOTE 2. — The student will notice that the syllable may be long and the vowel short; but the vowel cannot be long and the syllable short.

NOTE 3. — Old English short vowels, occurring in open syllables, have regularly become long in Modern English: *we-fan*, to weave; *e-tan*, to eat; *ma-cian*, to make; *na-cod*, naked; *a-can*, to ache; *o-fer*, over. And Old English long vowels, preceding two or more consonants, have generally been shortened: *brōost*, breast; *hǣlð*, health; *slǣpte*, slept; *lǣdde*, led.

### Accentuation.

11. The accent in Old English falls usually on the radical syllable, never on the inflectional ending: *bríngan*, to bring; *stānas*, stones; *bérende*, bearing; *ídelnes*, idleness; *fréondscipe*, friendship.

But in the case of compound nouns, adjectives, and adverbs the first member of the compound (unless it be *ge-* or *be-*) receives the stronger stress: *héofon-ríce*, heaven-kingdom; *ǫnd-giet*, intelligence; *sōð-fæst*, truthful; *gód-cund*, divine; *éall-unga*, entirely; *blíðe-líce*, blithely. But *be-hát*, promise; *ge-béd*, prayer; *ge-féalíc*, joyous; *be-sōne*, immediately.

Compound verbs, however, have the stress on the radical syllable: *for-gíefan*, to forgive; *of-línnan*, to cease; *ā-cnāwan*, to know; *wið-stóndan*, to withstand; *on-sácan*, to resist.

NOTE. — The tendency of nouns to take the stress on the prefix, while verbs retain it on the root, is exemplified in many Modern English words: *préference*, *préfér*; *cóntract* (noun), *contráct* (verb); *ábstinence*, *abstáin*; *pérfume* (noun), *pérfúme* (verb).

## CHAPTER III.

## INFLECTIONS.

## Cases.

12. There are five cases in Old English: the nominative, the genitive, the dative, the accusative, and the instrumental.<sup>1</sup> Each of them, except the nominative, may be governed by prepositions. When used without prepositions, they have, in general, the following functions:

(a) The nominative, as in Modern English, is the case of the subject of a finite verb.

(b) The genitive (the possessive case of Modern English) is the case of the possessor or source. It may be called the *of* case.

(c) The dative is the case of the indirect object. It may be called the *to* or *for* case.

(d) The accusative (the objective case of Modern English) is the case of the direct object.

(e) The instrumental, which rarely differs from the dative in form, is the case of the means or the method. It may be called the *with* or *by* case.

The following paradigm of *mūð*, *the mouth*, illustrates the several cases (the article being, for the present, gratuitously added in the Modern English equivalents):

---

<sup>1</sup> Most grammars add a sixth case, the vocative. But it seems best to consider the vocative as only a *function* of the nominative form.

| Singular.  | Plural.  |
|--|--|
| N. <b>mūð</b> = the mouth.                                       | <b>mūð-as</b> = the mouths.                        |
| G. <b>mūð-es</b> <sup>1</sup> = of the mouth<br>(= the mouth's). | <b>mūð-a</b> = of the mouths.<br>(= the mouths').  |
| D. <b>mūð-e</b> =to or for the mouth.                            | <b>mūð-um</b> = to or for the mouths.              |

### Gender.

**13.** The gender of Old English nouns, unlike that of Modern English, depends partly on meaning and partly on form, or ending. Thus **mūð**, *mouth*, is masculine; **tunge**, *tongue*, feminine; **ēage**, *eye*, neuter.

No very comprehensive rules, therefore, can be given; but the gender of every noun should be learned with its meaning. Gender will be indicated in the vocabularies by the different gender forms of the definite article, **sē** for the masculine, **sēo** for the feminine, and **ðæt** for the neuter: **sē mūð**, **sēo tunge**, **ðæt ēage** = *the mouth, the tongue, the eye*.

All nouns ending in **-dōm**, **-hād**, **-scipe**, or **-ere** are masculine (*cf.* Modern English *wisdom*, *childhood*, *friendship*, *worker*). Masculine, also, are nouns ending in **-a**.

Those ending in **-nes** or **-ung** are feminine (*cf.* Mod-

<sup>1</sup> Of course our "apostrophe and s" (= 's) comes from the Old English genitive ending **-es**. The *e* is preserved in *Wednesday* (= Old English **Wōdnes dæg**). But at a very early period it was thought that *John's book*, for example, was a shortened form of *John his book*. Thus Addison (*Spectator*, No. 135) declares 's a survival of *his*. How, then, would he explain the *s* of *his*? And how would he dispose of *Mary's book*?

ern English goodness, and gerundial forms in *-ing*: seeing is believing).

Thus *sē wīsdōm*, *wisdom*; *sē cildhād*, *childhood*; *sē frēondscipe*, *friendship*; *sē fiscere*, *fisher(man)*; *sē hunta*, *hunter*; *sēo gelīcnes*, *likeness*; *sēo leornung*, *learning*.

### Declensions.

**14.** There are two great systems of declension in Old English, the Vowel Declension and the Consonant Declension. A noun is said to belong to the Vowel Declension when the final letter of its stem is a vowel, this vowel being then known as the *stem-characteristic*; but if the stem-characteristic is a consonant, the noun belongs to the Consonant Declension. There might have been, therefore, as many subdivisions of the Vowel Declension in Old English as there were vowels, and as many subdivisions of the Consonant Declension as there were consonants. All Old English nouns, however, belonging to the Vowel Declension, ended their stems originally in *a*, *ō*, *i*, or *u*. Hence there are but four subdivisions of the Vowel Declension: *a*-stems, *ō*-stems, *i*-stems, and *u*-stems.

The Vowel Declension is commonly called the Strong Declension, and its nouns Strong Nouns.

NOTE. — The terms Strong and Weak were first used by Jacob Grimm (1785-1863) in the terminology of verbs, and thence transferred to nouns and adjectives. By a Strong Verb, Grimm meant one that could form its preterit out of its own resources; that is, without calling in the aid of an additional syllable: Modern English *run*, *ran*; *find*, *found*; but verbs of the Weak Conjugation had to borrow, as it were, an inflectional syllable: *gain*, *gained*; *help*, *helped*.

**15.** The stems of nouns belonging to the Consonant Declension ended, with but few exceptions, in the letter **n** (*cf.* Latin *homin-em*, *ration-em*, Greek *ποιμέν-α*). They are called, therefore, **n**-stems, the Declension itself being known as the **n**-Declension, or the Weak Declension. The nouns, also, are called Weak Nouns.

**16.** If every Old English noun had preserved the original Germanic stem-characteristic (or final letter of the stem), there would be no difficulty in deciding at once whether any given noun is an **a**-stem, **ō**-stem, **i**-stem, **u**-stem, or **n**-stem; but these final letters had, for the most part, either been dropped, or fused with the case-endings, long before the period of historic Old English. It is only, therefore, by a rigid comparison of the Germanic languages with one another, and with the other Aryan languages, that scholars are able to reconstruct a single Germanic language, in which the original stem-characteristics may be seen far better than in any one historic branch of the Germanic group (§ 5, Note).

This hypothetical language, which bears the same ancestral relation to the historic Germanic dialects that Latin bears to the Romance tongues, is known simply as *Germanic* (Gmc.), or as *Primitive Germanic*. Ability to reconstruct Germanic forms is not expected of the students of this book, but the following table should be examined as illustrating the basis of distinction among the several Old English declensions (O.E. = Old English, Mn.E. = Modern English):

NOTE.—“It will be seen that if Old English *ēage*, *eye*, is said to be an n-stem, what is meant is this, that at some former period the kernel of the word ended in *-n*, while, as far as the Old English language proper is concerned, all that is implied is that the word is inflected in a certain manner.” (Jespersen, *Progress in Language*, § 109).

This is true of all Old English stems, whether Vowel or Consonant. The division, therefore, into a-stems,  $\bar{o}$ -stems, etc., is made in the interests of grammar as well as of philology.

### Conjugations.

17. There are, likewise, two systems of conjugation in Old English: the Strong or Old Conjugation, and the Weak or New Conjugation.

The verbs of the Strong Conjugation (the so-called Irregular Verbs of Modern English) number about three hundred, of which not one hundred remain in Modern English (§ 101, Note). They form their preterit and frequently their past participle by changing the radical vowel of the present stem. This vowel change or modification is called *ablaut* (pronounced *áhp-lowt*): Modern English *sing, sang, sung; rise, rose, risen*. As the radical vowel of the preterit plural is often different from that of the preterit singular, there are four *principal parts* or *tense stems* in an Old English strong verb, instead of the three of Modern English. The four principal parts in the conjugation of a strong verb are (1) the present indicative, (2) the preterit indicative singular, (3) the preterit indicative plural, and (4) the past participle.

Strong verbs fall into seven groups, illustrated in the following table:

| PRESENT.  | PRET. SING.                       | PRET. PLUR.                          | PAST PARTICIPLE.   |

| II.<br><b>Bēodan, to bid:</b><br><b>Ic bēod-e, I bid</b> or<br><i>shall bid.</i>              | <b>Ic bēad, I</b><br><i>bade.</i> | <b>Wē bud-on,</b><br><i>we bade.</i> | <b>Ic hæbbe ge-bod-</b><br><b>en, I have bidden.</b>             |

<sup>1</sup> Early West Saxon had no distinctive form for the future. The present was used both as present proper and as future. Cf. Modern English "I go home tomorrow," or "I am going home tomorrow" for "I shall go home tomorrow."

<sup>2</sup> The prefix *ge-* (Middle English *y-*), cognate with Latin *co* (*con*) and implying completeness of action, was not always used. It never

18. The verbs of the Weak Conjugation (the so-called Regular Verbs of Modern English) form their preterit

occurs in the past participles of compound verbs: **oþ-feallan**, to fall off, past participle **oþ-feallen** (not **oþ-gefeallen**). Milton errs in prefixing it to a present participle:

“What needs my Shakespeare, for his honour’d bones,  
The labour of an age in piled stones?  
Or that his hallow’d reliques should be hid  
Under a star-ypointing pyramid.”

— Epitaph on William Shakespeare.

And Shakespeare misuses it in “Y-ravished,” a preterit (*Pericles* III, *Prologue* l. 35).

It survives in the archaic *y-clept* (Old English **ge-clypod**, called). It appears as *a* in *aware* (Old English **ge-wær**), as *e* in *enough* (Old English **ge-nōh**), and as *i* in *handiwork* (Old English **hand-ge-weorc**).

<sup>1</sup> With intransitive verbs denoting *change of condition*, the Old English auxiliary is usually some form of *to be* rather than *to have*.

See § 139.

and past participle by adding to the present stem a suffix<sup>1</sup> with *d* or *t*: Modern English *love, loved; sleep, slept*.

The stem of the preterit plural is never different from the stem of the preterit singular; hence these verbs have only three distinctive tense-stems, or principal parts: *viz.*, (1) the present indicative, (2) the preterit indicative, and (3) the past participle.

Weak verbs fall into three groups, illustrated in the following table:

| PRESENT.   | PRETERIT.                              | PAST PARTICIPLE.                                  |
|--|--|---|
| I.<br><b>Frēmman</b> , to perform:<br><b>Ic frēm-m-e</b> , I perform<br>or shall perform.  | <b>Ic frēm-ede</b> , I per-<br>formed. | <b>Ic hǣbbe ge-frēm-ed</b> ,<br>I have performed. |
| II.<br><b>Bodian</b> , to proclaim:<br><b>Ic bodi-e</b> , I proclaim<br>or shall proclaim. | <b>Ic bod-ode</b> , I pro-<br>claimed. | <b>Ic hǣbbe ge-bod-od</b> ,<br>I have proclaimed. |
| III.<br><b>Habban</b> , to have:<br><b>Ic hǣbbe</b> , I have or<br>shall have.             | <b>Ic hǣf-de</b> , I had.              | <b>Ic hǣbbe ge-hǣf-d</b> , I<br>have had.         |

19. There remain a few verbs (chiefly the Auxiliary Verbs of Modern English) that do not belong entirely to either of the two conjugations mentioned. The most important of them are, **Ic mæg** I may, **Ic mihte** I might; **Ic cōn** I can, **Ic cūðe** I could; **Ic mōt** I must, **Ic mōste** I

<sup>1</sup> The theory that *loved*, for example, is a fused form of *love-did* has been generally given up. The dental ending was doubtless an Indo-Germanic suffix, which became completely specialized only in the Teutonic languages.

*must*; **Ic sceal** *I shall*, **Ic sceolde** *I should*; **Ic eom** *I am*, **Ic wæs** *I was*; **Ic wille** *I will*, **Ic wolde** *I would*; **Ic dō** *I do*, **Ic dyde** *I did*; **Ic gā** *I go*, **Ic ēode** *I went*.

All but the last four of these are known as Preterit-Present Verbs. The present tense of each of them is *in origin* a preterit, *in function* a present. Cf. Modern English *ought* (= *owed*).

## CHAPTER IV.

### ORDER OF WORDS.

20. The order of words in Old English is more like that of Modern German than of Modern English. Yet it is only the Transposed order that the student will feel to be at all un-English; and the Transposed order, even before the period of the Norman Conquest, was fast yielding place to the Normal order.

The three divisions of order are (1) Normal, (2) Inverted, and (3) Transposed.

(1) Normal order = subject + predicate. In Old English, the Normal order is found chiefly in independent clauses. The predicate is followed by its modifiers: **Sē hwæl bið micle læssa þonne oðre hwalas**, *That whale is much smaller than other whales*; **Qnd hē geseah twā scipu**, *And he saw two ships*.

(2) Inverted order = predicate + subject. This order occurs also in independent clauses, and is employed (a) when some modifier of the predicate precedes the predicate, the subject being thrown behind. The

words most frequently causing Inversion in Old English prose are *pā then*, *þonne then*, and *pær there*: *Ðā fōr hē, Then went he*; *Ðonne ærnað hȳ ealle tōweard þæm fēo, Then gallop they all toward the property*; *ac pær bið meoðo genōh, but there is mead enough*.

Inversion is employed (b) in interrogative sentences: *Lufast ðū mē? Lovest thou me?* and (c) in imperative sentences: *Cume ðīn rīce, Thy kingdom come*.

(3) Transposed order = subject . . . predicate. That is, the predicate comes last in the sentence, being preceded by its modifiers. This is the order observed in dependent clauses:<sup>1</sup> *Ðonne cymeð sē man sē þæt swiftoste hors hafað, Then comes the man that has the swiftest horse* (literally, *that the swiftest horse has*); *Ne mētte hē ær nān gebūn land, sippan hē from his āgnun hām fōr, Nor did he before find any cultivated land, after he went from his own home* (literally, *after he from his own home went*).

**21.** Two other peculiarities in the order of words require a brief notice.

(1) Pronominal datives and accusatives usually precede the predicate: *Hē hine oferwann, He overcame him* (literally, *He him overcame*); *Dryhten him andwyrde, The Lord answered him*. But substantival datives and accusatives, as in Modern English, follow the predicate.

<sup>1</sup> But in the *Voyages of Othhere and Wulfstan*, in which the style is apparently more that of oral than of written discourse, the Normal is more frequent than the Transposed order in dependent clauses. In his other writings Alfred manifests a partiality for the Transposed order in dependent clauses, except in the case of substantival clauses introduced by *þæt*. Such clauses show a marked tendency to revert to their Normal *oratio recta* order. The norm thus set by the indirect affirmative clause seems to have proved an important factor in the

The following sentence illustrates both orders: **Hƿ** genāmon Ioseph, qnd hine gesealdon cīpemōnnum, qnd hƿ hine gesealdon in Ēgypta lōnd, *They took Joseph, and sold him to merchants, and they sold him into Egypt* (literally, *They took Joseph, and him sold to merchants, and they him sold into Egyptians' land*).

NOTE.—The same order prevails in the case of pronominal nominatives used as predicate nouns:  **Ic hit eom**, *It is I* (literally, *I it am*);  **Ðū hit eart**, *It is thou* (literally, *Thou it art*).

(2) The attributive genitive, whatever relationship it expresses, usually precedes the noun which it qualifies: **Breoton is gārsecges īgland**, *Britain is an island of the ocean* (literally, *ocean's island*); **Swilce hit is ēac berende on węcga ōrum**, *Likewise it is also rich in ores of metals* (literally, *metals' ores*); **Cyninga cyning**, *King of kings* (literally, *Kings' king*); **Gē witon Godes rīces gerȳne**, *Ye know the mystery of the kingdom of God* (literally, *Ye know God's kingdom's mystery*).

A preposition governing the word modified by the genitive, precedes the genitive:<sup>1</sup> **On ealdra manna sęgenum**, *In old men's sayings*; **Æt ðǣra strǣta ęndum**, *At the ends of the streets* (literally, *At the streets' ends*); **For ealra ðīnra hālgena lufan**, *For all thy saints' love*. See, also, § 94, (5).

---

ultimate disappearance of Transposition from dependent clauses. The influence of Norman French helped only to consummate forces that were already busily at work.

<sup>1</sup> The positions of the genitive are various. It frequently follows its noun: **pā bearn pāra Aðeniensa**, *The children of the Athenians*. It may separate an adjective and a noun: **Ān lȳtel sǣs earm**, *A little arm of (the) sea*. The genitive may here be construed as an adjective, or part of a compound = *A little sea-arm*; **Mid mōnegum Godes gifum**, *With many God-gifts* = *many divine gifts*.

CHAPTER V.

PRACTICAL SUGGESTIONS.

22. In the study of Old English, the student must remember that he is dealing not with a foreign or isolated language but with the earlier forms of his own mother tongue. The study will prove profitable and stimulating in proportion as close and constant comparison is made of the old with the new. The guiding principles in such a comparison are reducible chiefly to two. These are (1) the regular operation of phonetic laws, resulting especially in certain Vowel Shiftings, and (2) the alterations in form and syntax that are produced by Analogy.

(1) "The former of these is of physiological or *natural* origin, and is perfectly and inflexibly regular throughout the same period of the same language; and even though different languages show different phonetic habits and predilections, there is a strong general resemblance between the changes induced in one language and in another; many of the particular laws are true for many languages.

(2) "The other principle is psychical, or mental, or *artificial*, introducing various more or less capricious changes that are supposed to be emendations; and its operation is, to some extent, uncertain and fitful."<sup>1</sup>

---

<sup>1</sup> Skeat, *Principles of English Etymology*, Second Series, § 342. But Jespersen, with Collitz and others, stoutly contests "the theory of sound laws and analogy sufficing between them to explain everything in linguistic development."

## (1) Vowel-Shiftings.

23. It will prove an aid to the student in acquiring the inflections and vocabulary of Old English to note carefully the following shiftings that have taken place in the gradual growth of the Old English vowel system into that of Modern English.

(1) As stated in § 3, the Old English inflectional vowels, which were all short and unaccented, weakened in early Middle English to *e*. This *e* in Modern English is frequently dropped :

(2) The Old English long vowels have shifted their phonetic values with such uniform regularity that it is possible in almost every case to infer the Modern English sound ; but our spelling is so chaotic that while the student may infer the modern sound, he cannot always infer the modern symbol representing the sound.

(2) Analogy.

24. But more important than vowel shifting is the great law of Analogy, for Analogy shapes not only words but constructions. It belongs, therefore, to

Etymology and to Syntax, since it influences both form and function. By this law, minorities tend to pass over to the side of the majorities. "The greater mass of cases exerts an assimilative influence upon the smaller."<sup>1</sup> The effect of Analogy is to simplify and to regularize. "The main factor in getting rid of irregularities is group-influence, or Analogy — the influence exercised by the members of an association-group on one another. . . . Irregularity consists in partial isolation from an association-group through some formal difference."<sup>2</sup>

Under the influence of Analogy, entire declensions and conjugations have been swept away, leaving in Modern English not a trace of their former existence. There are in Old English, for example, five plural endings for nouns, **-as**, **-a**, **-e**, **-u**, and **-an**. No one could well have predicted<sup>3</sup> that **-as** (Middle English *-es*) would soon take the lead, and become the norm to which the other endings would eventually conform, for there were more **an**-plurals than **as**-plurals; but the **as**-plurals were doubtless more often employed in everyday speech. *Oxen* (Old English **oxan**) is the sole pure survival of the hundreds of Old English **an**-plurals.

<sup>1</sup> Whitney, *Life and Growth of Language*, Chap. IV.

<sup>2</sup> Sweet, *A New English Grammar*, Part I., § 535.

<sup>3</sup> As Skeat says (§ 22, (2)), Analogy is "fitful." It enables us to explain many linguistic phenomena, but not to anticipate them. The multiplication of books tends to check its influence by perpetuating the forms already in use. Thus Chaucer employed nine *en*-plurals, and his influence served for a time to check the further encroachment of the *es*-plurals. As soon as there is an acknowledged standard in any language, the operation of Analogy is fettered.

No group of feminine nouns in Old English had *-es* as the genitive singular ending; but by the close of the Middle English period all feminines formed their genitive singular in *-es* (or *-s*, Modern English 's) after the analogy of the Old English masculine and neuter nouns with *es*-genitives. The weak preterits in *-ode* have all been leveled under the *ed*-forms, and of the three hundred strong verbs in Old English more than two hundred have become weak.

These are not cases of derivation (as are the shifted vowels): Modern English *-s* in *sons*, for example, could not possibly be derived from Old English *-a* in *sunā*, or Middle English *-e* in *sune* (§ 23, (1)). They are cases of replacement by Analogy.

A few minor examples will quicken the student's appreciation of the nature of the influence exercised by Analogy:

(a) The intrusive *l* in *could* (Chaucer always wrote *coud* or *coude*) is due to association with *would* and *should*, in each of which *l* belongs by etymological right.

(b) *He need not* (for *He needs not*) is due to the assimilative influence of the auxiliaries *may*, *can*, etc., which have never added *-s* for their third person singular (§ 137).

(c) *I am friends with him*, in which *friends* is a crystalized form for *on good terms*, may be traced to the influence of such expressions as *He and I are friends*, *They are friends*, etc.

(d) Such errors as are seen in *runned*, *seed*, *gooses*, *badder*, *hissself*, *says I* (usually coupled with *says he*)

are all analogical formations. Though not sanctioned by good usage, it is hardly right to call these forms the products of "false analogy." The grammar involved is false, because unsupported by literary usages and traditions; but the analogy on which these forms are built is no more false than the law of gravitation is false when it makes a dress sit unconventionally.

#### THE STRONG OR VOWEL DECLENSIONS OF NOUNS. THE a-DECLENSION.

#### CHAPTER VI.

##### (a) Masculine *a*-Stems.

[O.E., M.E., and Mn.E. will henceforth be used for Old English, Middle English, and Modern English. Other abbreviations employed are self-explaining.]

25. The *a*-Declension, corresponding to the Second or *o*-Declension of Latin and Greek, contains only (*a*) masculine and (*b*) neuter nouns. To this declension belong most of the O.E. masculine and neuter nouns of the Strong Declension. At a very early period, many of the nouns belonging properly to the *i*- and *u*-Declensions began to pass over to the *a*-Declension. This declension may therefore be considered the *normal declension* for all masculine and neuter nouns belonging to the Strong Declension.

26. Paradigms of *sē mūð*, *mouth*; *sē fiscere*, *fisherman*; *sē hwæl*, *whale*; *sē mearh*, *horse*; *sē finger*, *finger* :

|                   |        |           |         |         |          |

| <i>D.I.</i>       | mūð-um | fiscer-um | hwal-um | mēar-um | fingr-um |

NOTE. — For meanings of the cases, see § 12. The dative and instrumental are alike in all nouns.

27. The student will observe (1) that nouns whose nominative ends in *-e* (*fiscere*) drop this letter before adding the case endings; (2) that *æ* before a consonant (*hwæl*) changes to *a* in the plural;<sup>1</sup> (3) that *h*, preceded by *r* (*mearh*) or *l* (*seolh*, *seal*), is dropped before an inflectional vowel, the stem diphthong being then lengthened by way of compensation; (4) that dissyllables (*finger*) having the first syllable long, usually syncopate the vowel of the second syllable before adding the case endings.<sup>2</sup>

## 28. Paradigm of the Definite Article<sup>3</sup> *sē*, *sēo*, *ðæt* = *the*:

<sup>1</sup> Adjectives usually retain *æ* in closed syllables, changing it to *a* in open syllables: *hwæt* (*active*), *glæd* (*glad*), *wær* (*wary*) have *G.* *hwates*, *glades*, *wares*; *D.* *hwatum*, *gladum*, *warum*; but *A.* *hwætne*, *glædne*, *wærne*. Nouns, however, change to *a* only in open syllables followed by a guttural vowel, *a* or *u*. The *æ* in the open syllables of the singular is doubtless due to the analogy of the *N.A.* singular, both being closed syllables.

<sup>2</sup> Cf. *Mn.E.* *drizz'ling*, *rememb'ring*, *abysmal* (*abysm* = *abiz'm*), *sick'ning*, in which the principle of syncopation is precisely the same.

<sup>3</sup> This may mean four things: (1) *The*, (2) *That* (demonstrative), (3) *He*, *she*, *it*, (4) *Who*, *which*, *that* (relative pronoun). *Mn.E.* demonstrative *that* is, of course, the survival of *O.E.* neuter *ðæt* in its demonstrative sense. Professor Victor Henry (*Comparative Grammar of English and German*, § 160, 3) sees a survival of dative plural demonstrative *ðæm* in such an expression as *in them days*. It seems more probable, however, that *them* so used has followed the lead of

**33.** The paradigms show (1) that monosyllables with short stems (*hof*) take *-u* in the N.A. plural; (2) that

monosyllables with long stems (**bearn**, **bān**) do not distinguish the N. A. plural from the N. A. singular; <sup>1</sup> (3) that dissyllables in **-e**, whether the stem be long or short (**rīce**, **spere**), have **-u** in the N. A. plural; (4) that dissyllables ending in a consonant and having the first syllable short<sup>2</sup> (**werod**) do not usually distinguish the N. A. plural from the N. A. singular; (5) that dissyllables ending in a consonant and having the first syllable long (**tungol**) more frequently take **-u** in the N. A. plural.

NOTE. — Syncopation occurs as in the masculine a-stems. See § 27, (4).

 3. **hīe hæfdon**, *they had.*

<sup>1</sup> Note the many nouns in Mn. E. that are unchanged in the plural. These are either survivals of O. E. long stems, *swine, sheep, deer, folk*, or analogical forms, *fish, trout, mackerel, salmon*, etc.

<sup>2</sup> Dissyllables whose first syllable is a prefix are, of course, excluded. They follow the declension of their last member: **gebed**, *prayer*, **gebedu**, *prayers*; **gefoht**, *battle*, **gefoht**, *battles*.

<sup>3</sup> See § 17, Note 1. Note that (as in **hwæl**, § 27, (2)) **æ** changes to **a** when the following syllable contains **a**: **hæbbe**, but **hafast**.

NOTE.—The negative **ne**, *not*, which always precedes its verb, contracts with all the forms of **habban**. The negative loses its **e**, **habban** its **h**. **Ne + habban = nabban**; **Ic ne hæbbe = Ic næbbe**; **Ic ne hæfde = Ic næfde**, etc. The negative forms may be got, therefore, by simply substituting in each case **n** for **h**.

NOTE 1.—The forms **bēom**, **bist**, etc. are used chiefly as future tenses in O.E. They survive to-day only in dialects and in poetry. Farmer Dobson, for example, in Tennyson's *Promise of May*, uses *be* for all persons of the present indicative, both singular and plural; and *there be* is frequent in Shakespeare for *there are*. The Northern dialect employed **aron** as well as **sindon** and **sind** for the present plural; hence Mn.E. *are*.

NOTE 2.—Fusion with **ne** gives **neom**, **neart**, **nis** for the present; **næs**, **nære**, **næron** for the preterit.

NOTE 3.—The verb *to be* is followed by the nominative case, as in Mn.E.; but when the predicate noun is plural, and the subject a neuter pronoun in the singular, the verb agrees in number with the predicate noun. The neuter singular **ðæt** is frequently employed in this construction: **Ðæt wæron eall Finnas**, *They were all Fins*; **Ðæt sind englas**, *They are angels*; **Ðæt wæron engla gāstas**, *They were angels' spirits*.

Notice, too, that O.E. writers do not say *It is I*, *It is thou*, but *I it am*, *Thou it art*: **Ic hit eom**, **ðū hit eart**. See § 21, (1), Note 1.

## CHAPTER IX.

THE *i*-DECLENSION AND THE *u*-DECLENSION.The *i*-Declension. (See § 58.)

43. The *i*-Declension, corresponding to the group of *i*-stems in the classical Third Declension, contains chiefly (a) masculine and (b) feminine nouns. The N.A. plural of these nouns ended originally in *-e* (from older *i*).

<sup>1</sup> As in *warden of the marches.*

*(a) Masculine i-Stems.*

44. These stems have almost completely gone over to the a-Declension, so that *-as* is more common than *-e* as the N.A. plural ending, whether the stem is long or short. The short stems all have *-e* in the N.A. singular.

45. Paradigms of *sē wȳrm*, *worm*; *sē wine*, *friend*.

|                   |         |            |
|-------------------|---------|------------|
| <i>Sing. N.A.</i> | wȳrm    | win-e      |
| <i>G.</i>         | wȳrm-es | win-es     |
| <i>D.I.</i>       | wȳrm-e  | win-e      |
| <i>Plur. N.A.</i> | wȳrm-as | win-as (e) |
| <i>G.</i>         | wȳrm-a  | win-a      |
| <i>D.I.</i>       | wȳrm-um | win-um     |

**Names of Peoples.**

46. The only *i*-stems that regularly retain *-e* of the N.A. plural are certain names of tribes or peoples used only in the plural.

47. Paradigms of *ǣa Fenge*, *Angles*; *ǣa Norðymbre*, *Northumbrians*; *ǣa lēode*, *people*:

|                   |         |            |        |
|-------------------|---------|------------|--------|
| <i>Plur. N.A.</i> | Fenge   | Norðymbre  | lēode  |
| <i>G.</i>         | Fengla  | Norðymbra  | lēoda  |
| <i>D.I.</i>       | Fenglum | Norðymbrum | lēodum |

*(b) Feminine i-Stems.*

48. The short stems (*frēm-u*) conform entirely to the declension of short *ō*-stems; long stems (*cwēn*, *wȳrt*) differ from long *ō*-stems in having no ending for the A. singular. They show, also, a preference for *-e* rather than *-a* in the N.A. plural.

49. Paradigms of *sēo frēm-u*, *benefit*; *sēo cwēn*, *woman*, *queen* [quean]; *sēo wyrt*, *root* [wort]:

| <i>D.I.</i>       | frēm-e  | cwēn-e     | wyrt-e     |
| <i>A.</i>         | frēm-e  | cwēn       | wyrt       |
| <i>Plur. N.A.</i> | frēm-a  | cwēn-e (a) | wyrt-e (a) |
| <i>G.</i>         | frēm-a  | cwēn-a     | wyrt-a     |
| <i>D.I.</i>       | frēm-um | cwēn-um    | wyrt-um    |

### The u-Declension.

50. The u-Declension, corresponding to the group of u-stems in the classical Third Declension, contains no neuters, and but few (*a*) masculines and (*b*) feminines. The short-stemmed nouns of both genders (*sun-u*, *dur-u*) retain the final u of the N.A. singular, while the long stems (*feld*, *hōnd*) drop it. The influence of the masculine a-stems is most clearly seen in the long-stemmed masculines of the u-Declension (*feld*, *feld-es*, etc.).

NOTE.—Note the general aversion of all O.E. long stems to final -u: cf. N.A. plural *hof-u*, but *bearn*, *bān*; N. singular *gief-u*, but *wund*, *rōd*; N. singular *frēm-u*, but *cwēn*, *wyrt*; N.A. singular *sun-u*, *dur-u*, but *feld*, *hōnd*.

#### (a) Masculine u-Stems.

51. Paradigms of *sē sun-u*, *son*; *sē feld*, *field*:

CHAPTER X.

PRESENT INDICATIVE ENDINGS OF STRONG VERBS.

56. The unchanged stem of the present indicative may always be found by dropping -an of the infinitive: feall-an, to fall; cēos-an, to choose; bīd-an, to abide.

57. The personal endings are:

|          |         |            |       |
|----------|---------|------------|-------|
| Sing. 1. | -e      | Plur. 1. } |       |

|          | 3. -eð  |            |       |
|          |         |            |       |

<sup>1</sup> See § 21, (1).

<sup>2</sup> Pronouns agree in gender with the nouns for which they stand. Hit, however, sometimes stands for inanimate things of both masculine and feminine genders. See Wūlfing (*l.c.*) I, § 238.

<sup>3</sup> See § 76 (last sentence).

*i-Umlaut.*

58. The 2d and 3d singular endings were originally not *-est* and *-eð*, but *-is* and *-ið*; and the *i* of these older endings has left its traces upon almost every page of Early West Saxon literature. This *i*, though unaccented and soon displaced, exerted a powerful back influence upon the vowel of the preceding accented syllable. This influence, a form of regressive assimilation, is known as *i-umlaut* (pronounced *oöm-lowt*). The vowel *i* or *j* (= *y*), being itself a palatal, succeeded in palatalizing every guttural vowel that preceded it, and in imposing still more of the *i*-quality upon diphthongs that were already palatal.<sup>1</sup> The changes produced were these:

|    |        |       |  |
|----|--------|-------|--|
| a  | became | ę (æ) | : męnn (< *mann-iz), <i>men</i> .                        |
| ā  | “      | ǣ     | ǣnig (< *ān-ig), <i>any</i> .                            |
| u  | “      | y     | wyllen (< *wull-in), <i>woollen</i> .                    |
| ū  | “      | ȳ     | mȳs (< *mūs-iz), <i>mice</i> .                           |
| o  | “      | ę     | dęhter (< *doht-r-i), <i>to or for the daughter</i> .    |
| ō  | “      | ē     | fēt (< *fōt-iz), <i>feet</i> .                           |
| ea | “      | ie    | wieẏð (< *weax-ið), <i>he grows (weaxan = to grow)</i> . |
| ēa | “      | īe    | hīewð (< *hēaw-ið), <i>he hews (hēawan = to hew)</i> .   |
| eo | “      | ie    | wiercan (< *weorc-jan), <i>to work</i> .                 |
| ēo | “      | īe    | līehtan (< *lēoht-jan), <i>to light</i> .                |

## The Unchanged Present Indicative.

59. In the Northumbrian and Mercian dialects, as well as in the dialect of Late West Saxon, the 2d and 3d singular endings were usually joined to the present

<sup>1</sup> The *palatal* vowels and diphthongs were long or short *æ, e, i, (ie), y, ea, eo*; the *guttural* vowels were long or short *a, o, u*.

stem without modification either of the stem itself or of the personal endings. The complete absence of umlauted forms in the present indicative of Mn.E. is thus accounted for.

In Early West Saxon, however, such forms as the following are comparatively rare in the 2d and 3d singular :

|                 |                              |                            |                          |
|-----------------|------------------------------|----------------------------|--------------------------|
| <i>Sing.</i> 1. | Ic feall-e ( <i>I fall</i> ) | cēos-e ( <i>I choose</i> ) | bīd-e ( <i>I abide</i> ) |

| 3.              | hē feall-eð                  | cēos-eð                    | bīd-eð                   |

| 2.              | gē                           |                            |                          |

|                 | } feall-að                   | cēos-að                    | bīd-að                   |

#### The Present Indicative with *i*-Umlaut and Contraction.

60. The 2d and 3d persons singular are distinguished from the other forms of the present indicative in Early West Saxon by (1) *i*-umlaut of the vowel of the stem, (2) syncope of the vowel of the ending, giving *-st* and *-ð* for *-est* and *-eð*, and (3) contraction of *-st* and *-ð* with the final consonant or consonants of the stem.

#### Contraction.

61. The changes produced by *i*-umlaut have been already discussed. By these changes, therefore, the stems of the 2d and 3d singular indicative of such verbs as (1) *stōndan* (= *standan*), *to stand*, (2) *cuman*, *to come*, (3) *grōwan*, *to grow*, (4) *brūcan*, *to enjoy*, (5) *blāwan*, *to blow*, (6) *feallan*, *to fall*, (7) *hēawan*, *to hew*, (8) *weorpan*, *to throw*, and (9) *cēosan*, *to choose*,

become respectively (1) *stęnd-*,<sup>1</sup> (2) *cym-*, (3) *gręw-*, (4) *bręc-*, (5) *blęw-*, (6) *fiell-*, (7) *hiew-*, (8) *wierp-*, and (9) *cęes-*.

If the unchanged stem contains the vowel *e*, this is changed in the 2d and 3d singular to *i* (*ie*): *cweđan* to *say*, stem *cwiđ-*; *beran* to *bear*, stem *bier-*. But this mutation<sup>2</sup> had taken place long before the period of O.E., and belongs to the Germanic languages in general. It is best, however, to class the change of *e* to *i* or *ie* with the changes due to umlaut, since it occurs consistently in the 2d and 3d singular stems of Early West Saxon, and outlasted almost all of the umlaut forms proper.

If, now, the syncopated endings *-st* and *-đ* are added directly to the unlauded stem, there will frequently result such a massing of consonants as almost to defy pronunciation: *cwiđ-st*, *thou sayest*; *stęnd-st*, *thou standest*, etc. Some sort of contraction, therefore, is demanded for the sake of euphony. The ear and eye will, by a little practice, become a sure guide in these contractions. The following rules, however, must be observed. They apply only to the 2d and 3d singular of the present indicative:

<sup>1</sup> The more common form for stems with *a* is *ę* rather than *e*: *faran*, to *go*, 2d and 3d singular stem *fęer-*; *sacan*, to *contend*, stem *sęc-*. Indeed, *a* changes to *e* via *ę* (Cosijn, *Altwestsächsische Grammatik*, I, § 32).

<sup>2</sup> Umlaut is frequently called Mutation. Metaphony is still another name for the same phenomenon. The term Metaphony has the advantage of easy adjectival formation (metaphonic). It was proposed by Professor Victor Henry (*Comparative Grammar of English and German*, Paris, 1894), but has not been naturalized.

(1) If the stem ends in a double consonant, one of the consonants is dropped :

- |                              |                              |                              |
|------------------------------|------------------------------|------------------------------|
| 1. feall-e ( <i>I fall</i> ) | 1. winn-e ( <i>I fight</i> ) | 1. swimm-e ( <i>I swim</i> ) |
| 2. fiel-st                   | 2. win-st                    | 2. swim-st                   |
| 3. fiel-ð                    | 3. win-ð                     | 3. swim-ð                    |

(2) If the stem ends in -ð, this is dropped :

- |                            |                                |
|----------------------------|--------------------------------|
| 1. cweð-e ( <i>I say</i> ) | 1. weorð-e ( <i>I become</i> ) |
| 2. cwi-st                  | 2. wier-st                     |
| 3. cwi-ð                   | 3. wier-ð                      |

(3) If the stem ends in -a, this is changed to -t. The -ð of the ending is then also changed to -t, and usually absorbed. Thus the stem of the 2d singular serves as stem and ending for the 3d singular :

- |   |                             |
|---|-----------------------------|
| 1. stənd-e (= stand-e) ( <i>I stand</i> ) | 1. bind-e ( <i>I bind</i> ) |
| 2. stənt-st                               | 2. bint-st                  |
| 3. stənt                                  | 3. bint                     |
| 1. bīd-e ( <i>I abide</i> )               | 1. rīd-e ( <i>I ride</i> )  |
| 2. bīt-st                                 | 2. rīt-st                   |
| 3. bīt (-t)                               | 3. rīt (-t)                 |

(4) If the stem ends already in -t, the endings are added as in (3), -ð being again changed to -t and absorbed :

- |                               |                               |                            |
|-------------------------------|-------------------------------|----------------------------|
| 1. brēot-e ( <i>I break</i> ) | 1. feoht-e ( <i>I fight</i> ) | 1. bīt-e ( <i>I bite</i> ) |
| 2. brīet-st                   | 2. fieht-st                   | 2. bīt-st                  |
| 3. brīet (-t)                 | 3. fieht                      | 3. bīt (-t)                |

(5) If the stem ends in -s, this is dropped before -st (to avoid -sst), but is retained before -ð, the latter being changed to -t. Thus the 2d and 3d singulars are identical :<sup>1</sup>

---

<sup>1</sup> This happens also when the infinitive stem ends in st :

- |                               |
|-------------------------------|
| 1. berst-e ( <i>I burst</i> ) |
| 2. bier-st                    |
| 3. bierst.                    |

|                               |                            |
|-------------------------------|----------------------------|
| 1. cēos-e ( <i>I choose</i> ) | 1. rīs-e ( <i>I rise</i> ) |
| 2. cīe-st                     | 2. rī-st                   |
| 3. cīes-t                     | 3. rīs-t                   |

## CHAPTER XI.

## THE CONSONANT DECLENSIONS OF NOUNS.

The Weak or *n*-Declension.

63. The *n*-Declension contains almost all of the O.E. nouns belonging to the Consonant Declensions. The stem characteristic *n* has been preserved in the oblique

---

<sup>1</sup> *Brūcan*, to enjoy, usually takes the genitive case, not the accusative. It means "to have joy of anything."

cases, so that there is no difficulty in distinguishing n-stems from the preceding vowel stems.

The n-Declension includes (a) masculines, (b) feminines, and (c) neuters. The masculines far outnumber the feminines, and the neuters contain only *ēage*, *eye* and *ēare*, *ear*. The masculines end in -a, the feminines and neuters in -e.

64. Paradigms of (a) *sē hunta*, *hunter*; (b) *sēo tunge*, *tongue*; (c) *ðæt ēage*, *eye*:

“I request you (dative) of a favor” (genitive). Cf. *Cymbeline*, III, 6, 92: “We'll mannerly demand thee of thy story.” See Franz's *Shakespeare-Grammatik*, § 361 (1900).

<sup>1</sup> **Scēððan** is conjugated through the present indicative like **frēman**. See § 129.

## CHAPTER XII.

## Remnants of Other Consonant Declensions.

67. The nouns belonging here are chiefly masculines and feminines. Their stem ended in a consonant other than *n*. The most important of them may be divided as follows: (1) The *foot* Declension, (2) *r*-Stems, and (3) *nd*-Stems. These declensions are all characterized by the prevalence, wherever possible, of *i*-umlaut in certain cases, the case ending being then dropped.

68. (1) The nouns belonging to the *foot* Declension exhibit umlaut most consistently in the N.A. plural.

|                   |                               |                              |                                |                              |
|-------------------|-------------------------------|------------------------------|--------------------------------|------------------------------|
| <i>Sing. N.A.</i> | <i>sē fōt</i> ( <i>foot</i> ) | <i>sē mōn</i> ( <i>man</i> ) | <i>sē tōð</i> ( <i>tooth</i> ) | <i>sēo cū</i> ( <i>cow</i> ) |
| <i>Plur. N.A.</i> | <i>fēt</i>                    | <i>mēn</i>                   | <i>tēð</i>                     | <i>cȳ</i>                    |

NOTE.—The dative singular usually has the same form as the N.A. plural. Here belong also *sēo bōc* (*book*), *sēo burg* (*borough*), *sēo gōs* (*goose*), *sēo lūs* (*louse*), and *sēo mūs* (*mouse*), all with umlauted plurals. Mn.E. preserves only six of the *foot* Declension plurals: *feet*, *men*, *teeth*, *geese*, *lice*, and *mice*. The *c* in the last two is an artificial spelling, intended to preserve the sound of voiceless *s*. Mn.E. *kine* (= *cy-en*) is a double plural formed after the analogy of weak stems; Burns in *The Two Dogs* uses *kye*.

No umlaut is possible in *sēo niht* (*night*) and *sē mōnað* (*month*), plural *niht* and *mōnað* (preserved in Mn.E. *twelvemonth* and *fort-night*).

(2) The *r*-Stems contain nouns expressing kinship, and exhibit umlaut of the dative singular.

|                   |                   |                    |                   |                     |                    |
|-------------------|-------------------|--------------------|-------------------|---------------------|--------------------|
| <i>Sing. N.A.</i> | <i>sē fæder</i>   | <i>sē brōðor</i>   | <i>sēo mōdor</i>  | <i>sēo dohtor</i>   | <i>sēo swuster</i> |
|                   | ( <i>father</i> ) | ( <i>brother</i> ) | ( <i>mother</i> ) | ( <i>daughter</i> ) | ( <i>sister</i> )  |
| <i>D.</i>         | <i>fæder</i>      | <i>brēðer</i>      | <i>mēder</i>      | <i>dehter</i>       | <i>swyster</i>     |

NOTE.—The N.A. plural is usually the same as the N.A. singular. These umlaut datives are all due to the presence of a former *i*. Cf. Lat. dative singular *patri*, *frātri*, *mātri*, *sorori* (< \**sosori*), and Greek *θυγατρῆ*.

(3) The **nd**-Stems show umlaut both in the N.A. plural and in the dative singular:

|                   |                             |                           |
|-------------------|-----------------------------|---------------------------|
| <i>Sing. N.A.</i> | sē frēond ( <i>friend</i> ) | sē fēond ( <i>enemy</i> ) |
| <i>D.</i>         | frīend                      | fīend                     |
| <i>Plur. N.A.</i> | friend                      | fīend                     |

NOTE. — Mn.E. *friend* and *fīend* are interesting analogical spellings. When **s** had been added by analogy to the O.E. plurals **frīend** and **fīend**, thus giving the double plurals *friends* and *fīends*, a second singular was formed by dropping the **s**. Thus *friend* and *fīend* displaced the old singulars *frēnd* and *fēnd*, both of which occur in the M.E. *Ormulum*, written about the year 1200.

#### Summary of O.E. Declensions.

69. A brief, working summary of the O.E. system of declensions may now be made on the basis of gender.

All O.E. nouns are (1) masculine, (2) feminine, or (3) neuter.

(1) The masculines follow the declension of **mūð** (§ 26), except those ending in **-a**, which are declined like **hunta** (§ 64):

|                   |       |               |         |
|-------------------|-------|---------------|---------|
| <i>Sing. N.A.</i> | mūð   | <i>N.</i>     | hunta   |
| <i>G.</i>         | mūðes | <i>G.D.A.</i> | hunan   |
| <i>D.I.</i>       | mūðe  | <i>I.</i>     | hunan   |
| <i>Plur. N.A.</i> | mūðas |               | hunan   |
| <i>G.</i>         | mūða  |               | huntena |
| <i>D.I.</i>       | mūðum |               | huntum  |

(2) The short-stemmed neuters follow the declension of **hof** (§ 32); the long-stemmed, that of **bearn** (§ 32):

|                   |       |         |
|-------------------|-------|---------|
| <i>Sing. N.A.</i> | hof   | bearn   |
| <i>G.</i>         | hofes | bearnes |
| <i>D.I.</i>       | hofe  | bearne  |
| <i>Plur. N.A.</i> | hofu  | bearn   |
| <i>G.</i>         | hofa  | bearna  |
| <i>D.I.</i>       | hofum | bearnum |

(3) The feminines follow the declensions of *giefu* and *wund* (§ 38) (the only difference being in the N. singular), except those ending in *-e*, which follow the declension of *tunge* (§ 64):

|                   |               |               |                |
|-------------------|---------------|---------------|----------------|
| <i>Sing. N.</i>   | <i>giefu</i>  | <i>wund</i>   | <i>tunge</i>   |
| <i>G.</i>         | <i>giefe</i>  | <i>wunde</i>  | <i>tungan</i>  |
| <i>D.I.</i>       | <i>giefe</i>  | <i>wunde</i>  | <i>tungan</i>  |
| <i>A.</i>         | <i>giefe</i>  | <i>wunde</i>  | <i>tungan</i>  |
| <i>Plur. N.A.</i> | <i>giefa</i>  | <i>wunda</i>  | <i>tungan</i>  |
| <i>G.</i>         | <i>giefa</i>  | <i>wunda</i>  | <i>tungena</i> |
| <i>D.I.</i>       | <i>giefum</i> | <i>wundum</i> | <i>tungum</i>  |

NOTE 1. — The dual number was soon absorbed by the plural. No relic of it now remains. But when two and only two are referred to, the dual is consistently used in O.E. An example occurs in the case

of the two blind men (*Matthew ix. 27-31*): **Gemiltsa unc, Davīdes sunu!** *Pity us, (thou) Son of David!* **Sīe inc æfter incrum gelēafan,** *Be it unto you according to your faith.*

NOTE 2. — Mn.E. *ye* (< **gē**), the nominative proper, is fast being displaced by *you* (< **ēow**), the old objective. The distinction is preserved in the King James's version of the Bible: *Ye in me, and I in you* (*John xiv. 20*); but not in Shakespeare and later writers.

## (2) Demonstrative Pronouns.

**73.** Paradigm of **ðēs, ðeos, ðis**, *this*. For the Definite Article as a demonstrative, meaning *that*, see § 28, Note 3.

## (3) The Interrogative Pronoun.

**74.** Paradigm of **hwā, hwæt**, *who, what?*

|                 | <i>Masculine.</i> | <i>Neuter.</i> |
|-----------------|-------------------|----------------|
| <i>Sing. N.</i> | hwā               | hwæt           |
| <i>G.</i>       | hwæs              | hwæs           |
| <i>D.</i>       | hwām              | hwām           |
| <i>A.</i>       | hwone             | hwæt           |
| <i>I.</i>       | —                 | hwȳ            |

NOTE 1. — The derivative interrogatives, **hwæðer** (< \***hwā-ðer**), *which of two?* and **hwilc** (< \***hwā-lic**), *which?* are declined as strong adjectives (§§ 79-82).

NOTE 2. — The instrumental case of **hwā** survives in Mn.E. *why* = *on what account*; the instrumental of the definite article is seen in the

adverbial *the*: *The sooner, the better* = *by how much sooner, by so much better.*

NOTE 3. — How were the Mn.E. relative pronouns, *who* and *which*, evolved from the O.E. interrogatives? The change began in early West Saxon with *hwæt* used in indirect questions (Wulfing, *l.c.* § 310, β): *Nū ic wāt eall hwæt ðū woldest*, *Now I know all that thou desiredst.* The direct question was, *Hwæt woldest ðū?* But the presence of *eall* shows that in Alfred's mind *hwæt* was, in the indirect form, more relative than interrogative.

#### (4) Relative Pronouns.

75. O.E. had no relative pronoun proper. It used instead (1) the Indeclinable Particle *ðe*, *who*, *whom*, *which*, *that*, (2) the Definite Article (§ 28), (3) the Definite Article with the Indeclinable Particle, (4) the Indeclinable Particle with a Personal Pronoun.

The Definite Article agrees in gender and number with the antecedent. The case depends upon the construction. *The bird which I have* may, therefore, be: —

- (1) *Sē fugol ðe ic hæbbe;*
- (2) *Sē fugol ðone ic hæbbe;*
- (3) *Sē fugol ðone ðe (= the which) ic hæbbe;*
- (4) *Sē fugol ðe hine ic hæbbe.*

NOTE. — O.E. *ðe* agrees closely in construction with Mn.E. relative *that*: (1) Both are indeclinable. (2) Both refer to animate or inanimate objects. (3) Both may be used with phrasal value: *ðy ylcandæge ðe hī hine tō ðæm āde beran wyllað*, *On the same day that (= on which) they intend to bear him to the funeral pile.* (4) Neither can be preceded by a preposition.

#### (5) Possessive Pronouns.

76. The Possessive Pronouns are *mīn*, *mine*; *ðīn*, *thine*; *ūre*, *our*; *ēower*, *your*; [*sīn*, *his*, *her*, *its*]; *uncer*, *belonging to us two*; *incer*, *belonging to you two.* They

are declined as strong adjectives. The genitives of the Third Personal Pronoun, *his*, *his*, *hiere*, *her*, *hiera*, *their*, are indeclinable.

#### (6) Indefinite Pronouns.

**77.** These are *ælc*, *each*, *every*; *ān*, *a*, *an*, *one*; *ænig* (<*ān-ig*), *any*; *nænig* (<*ne-ænig*), *none*; *ōðer*, *other*; *sum*, *one*, *a certain one*; *swilc*, *such*. They are declined as strong adjectives.

NOTE. — O. E. had three established methods of converting an interrogative pronoun into an indefinite: (1) By prefixing *ge*, (2) by prefixing *æg*, (3) by interposing the interrogative between *swā* . . . *swā*: (1) *gehwā*, *each*; *gehwæðer*, *either*; *gehwilc*, *each*; (2) *æghwā*, *each*; *æghwæðer*, *each*; *æghwilc*, *each*; (3) *swā hwā swā*, *whosoever*; *swā hwæðer swā*, *whichever of two*; *swā hwilc swā*, *whosoever*.

## CHAPTER XIV.

### ADJECTIVES, STRONG AND WEAK.

**78.** The declension of adjectives conforms in general to the declension of nouns, though a few pronominal inflections have influenced certain cases. Adjectives belong either to (1) the Strong Declension or to (2) the Weak Declension. The Weak Declension is employed when the adjective is preceded by *sē* or *ðēs*, *the*, *that*, or *this*; otherwise, the Strong Declension is employed: *ðā gōðan cyningas*, *the good kings*; *ðēs gōða cyning*, *this good king*; but *gōðe cyningas*, *good kings*.

NOTE. — The Weak Declension is also frequently used when the adjective is employed in direct address, or preceded by a possessive

pronoun: Dryhten, ælmihtiga God . . . ic bidde ðē for ðīnre miclan mildheortnesse, Lord, almighty God, I pray thee, for thy great mercy.

### (1) Strong Declension of Adjectives.

#### (a) Monosyllables.

79. The strong adjectives are chiefly monosyllabic with long stems: *gōd*, *good*; *eald*, *old*; *lōng*, *long*; *swift*, *swift*. They are declined as follows.

#### 80. Paradigm of *gōd*, *good*:

|                   | <i>Masculine.</i> | <i>Feminine.</i> | <i>Neuter.</i> |
|-------------------|-------------------|------------------|----------------|
| <i>Sing. N.</i>   | <i>gōd</i>        | <i>gōd</i>       | <i>gōd</i>     |
| <i>G.</i>         | <i>gōdes</i>      | <i>gōdre</i>     | <i>gōdes</i>   |
| <i>D.</i>         | <i>gōdum</i>      | <i>gōdre</i>     | <i>gōdum</i>   |
| <i>A.</i>         | <i>gōdne</i>      | <i>gōde</i>      | <i>gōd</i>     |
| <i>I.</i>         | <i>gōde</i>       | —                | <i>gōde</i>    |
| <i>Plur. N.A.</i> | <i>gōde</i>       | <i>gōda</i>      | <i>gōd</i>     |
| <i>G.</i>         | <i>gōdra</i>      | <i>gōdra</i>     | <i>gōdra</i>   |
| <i>D.I.</i>       | <i>gōdum</i>      | <i>gōdum</i>     | <i>gōdum</i>   |

81. If the stem is short, -u is retained as in *giefu* (§ 39, (1)) and *hofu* (§ 33, (1)). Thus *glæd* (§ 27, Note 1), *glad*, and *til*, *useful*, are inflected:

|                   | <i>Masculine.</i>             | <i>Feminine.</i>              | <i>Neuter.</i>                |
|-------------------|-------------------------------|-------------------------------|-------------------------------|
| <i>Sing. N.</i>   | { <i>glæd</i><br><i>til</i>   | { <i>gladu</i><br><i>tilu</i> | { <i>glæd</i><br><i>til</i>   |
| <i>Plur. N.A.</i> | { <i>glade</i><br><i>tile</i> | { <i>glada</i><br><i>tila</i> | { <i>gladu</i><br><i>tilu</i> |

#### (b) Polysyllables.

82. Polysyllables follow the declension of short monosyllables. The most common terminations are -en, -en; -fæst, -fast; -full, -ful; -lēas, -less; -lic, -ly; -ig, -y; hǣð-en (hǣð = heath), heathen; stēde-fæst (stēde

= *place*), *steadfast*; *sorg-full* (*sorg* = *sorrow*), *sorrowful*; *cyst-lēas* (*cyst* = *worth*), *worthless*; *eorð-līc* (*eorðe* = *earth*), *earthly*; *blōd-ig* (*blōd* = *blood*), *bloody*. The present and past participles, when inflected and not as weak adjectives, may be classed with the polysyllabic adjectives, their inflection being the same.

Syncopation occurs as in *a*-stems (§ 27, (4)). Thus *hālig*, *holy*, *blīðe*, *blithe*, *berende*, *bearing*, *geboren*, *born*, are thus inflected:

|                   | <i>Masculine.</i> | <i>Feminine.</i> | <i>Neuter.</i>  |
|-------------------|-------------------|------------------|-----------------|
| <i>Sing. N.</i>   | { <i>hālig</i>    | <i>hālgū</i>     | <i>hālig</i>    |
|                   | { <i>blīðe</i>    | <i>blīðu</i>     | <i>blīðe</i>    |
|                   | { <i>berende</i>  | <i>berendu</i>   | <i>berende</i>  |
|                   | { <i>geboren</i>  | <i>geborenu</i>  | <i>geboren</i>  |
| <i>Plur. N.A.</i> | { <i>hālge</i>    | <i>hālga</i>     | <i>hālgū</i>    |
|                   | { <i>blīðe</i>    | <i>blīða</i>     | <i>blīðu</i>    |
|                   | { <i>berende</i>  | <i>berenda</i>   | <i>berendu</i>  |
|                   | { <i>geborene</i> | <i>geborena</i>  | <i>geborenu</i> |

(2) Weak Declension of Adjectives.

83. The Weak Declension of adjectives, whether monosyllabic or polysyllabic, does not differ from the Weak Declension of nouns, except that *-ena* of the genitive plural is usually replaced by *-ra* of the strong adjectives.

|                     | <i>Masculine.</i> | <i>Feminine.</i>      | <i>Neuter.</i> |
|---------------------|-------------------|-----------------------|----------------|
| 84. <i>Sing. N.</i> | <i>gōða</i>       | <i>gōde</i>           | <i>gōde</i>    |
| <i>G.</i>           | <i>gōdan</i>      | <i>gōdan</i>          | <i>gōdan</i>   |
| <i>D.I.</i>         | <i>gōdan</i>      | <i>gōdan</i>          | <i>gōdan</i>   |
| <i>A.</i>           | <i>gōdan</i>      | <i>gōdan</i>          | <i>gōde</i>    |
|                     |                   | <i>All Genders.</i>   |                |
| <i>Plur. N.A.</i>   |                   | <i>gōdan</i>          |                |
| <i>G.</i>           |                   | <i>gōdra (gōdena)</i> |                |
| <i>D.I.</i>         |                   | <i>gōdum</i>          |                |

## 85.

## RULE OF SYNTAX.

*Adjectives agree with their nouns in gender, number, and case; but participles, when used predicatively, may remain uninflected (§ 139, § 140).*

## 86.

## VOCABULARY.

dēad, *dead.*

## EXERCISES.

I. 1. Ðās scipu ne sind swiðe swift, ac hīe sind swiðe stælwierðu. 2. Sēo gōde cwēn giefð ælcum ðegne mōniga giefa. 3. Ðēs wīsa cyning hæfð mōnige mīcele tūnas on his rīce. 4. Nānig mōn is wīs on eallum ðingum. 5. Ðy ilcan dæge (§ 98, (2)) mōn fōnd (found) ðone ðegn ðe mīnes wines bēc hæfde. 6. Ealle ðā secgas ðā ðe swift hors habbað rīdað wið ðone bōnan. 7. Ðīne fīend sind mīne

<sup>1</sup> **Hālig**, *holy*, contains, of course, the same root. "I find," says Carlyle, "that you could not get any better definition of what 'holy' really is than 'healthy — completely healthy.'"

<sup>2</sup> This word has been much discussed. The older etymologists explained it as meaning *worth stealing*. A more improbable conjecture is that it means *worth a stall or place*. It is used of ships in the *Anglo-Saxon Chronicle*. As applied to men, Skeat thinks it meant *good or worthy at stealing*; but the etymology is still unsettled.

frīend. 8. Sē micela stān ðone ðe ic on mīnum hōndum hǣbbe is swīðe heard. 9. Hīe scēððað ðǣm ealdum horsum. 10. Uton niman ðās tilan giefa qnd hīe beran tō ūrum lēofum bearnum.

II. 1. These holy men are wise and good. 2. Are the little children very dear to the servants (dat. without tō)? 3. Gifts are not given (§ 70, Note 1) to rich men. 4. All the horses that are in the king's fields are swift. 5. These stones are very large and hard. 6. He takes the dead man's spear and fights against the large army. 7. This new house has many doors. 8. My ways are not your ways. 9. Whosoever chooses me, him I also (ēac) choose. 10. Every man has many friends that are not wise.

## CHAPTER XV.

### NUMERALS.

**88.** Numerals are either (a) Cardinal, expressing pure number, *one, two, three*; or (b) Ordinal, expressing rank or succession, *first, second, third*.

#### (a) Cardinals.

**89.** The Cardinals fall into the three following syntactic groups:

#### GROUP I.

1. ān
2. twēgen [twain]
3. ðrie

These numerals are inflected adjectives. **Ān**, *one, an*, *a*, being a long stemmed monosyllable, is declined like **gōd** (§ 80). The weak form, **āna**, means *alone*.

**Twēgen** and **ðrīe**, which have no singular, are thus declined :

|                   | <i>Masc.</i> | <i>Fem.</i> | <i>Neut.</i> | <i>Masc.</i> | <i>Fem.</i> | <i>Neut.</i> |
|-------------------|--------------|-------------|--------------|--------------|-------------|--------------|
| <i>Plur. N.A.</i> | twēgen       | twā         | twā (tū)     | ðrīe         | ðrēo        | ðrēo         |
| <i>G.</i>         | twēgra       | twēgra      | twēgra       | ðrēora       | ðrēora      | ðrēora       |
| <i>D.</i>         | { twām       | { twām      | { twām       | { ðrīm       | { ðrīm      | { ðrīm       |
|                   | { (twām)     | { (twām)    | { (twām)     |              |             |              |

## 90.

## GROUP II.

|              |                 |
|--------------|-----------------|
| 4. fēower    | 12. twelf       |
| 5. fif       | 13. ðrēotīene   |
| 6. siex      | 14. fēowertiene |
| 7. seofon    | 15. fiftīene    |
| 8. eahta     | 16. siextīene   |
| 9. nigon     | 17. seofontīene |
| 10. tīen     | 18. eahtatiene  |
| 11. ęndlefan | 19. nigontiene  |

These words are used chiefly as uninflected adjectives: *on gewitscipe ðrēora oppe fēower bisceopa, on testimony of three or four bishops; on siex dagum, in six days; ān nādre ðe hāfde nigon hēafdu, a serpent which had nine heads; æðeling eahtatiene wintra, a prince of eighteen winters.*

## 91.

## GROUP III.

|                    |                  |
|--------------------|------------------|
| 20. twēntig        | 80. hundeahtatig |
| 21. ān ond twēntig | 90. hundnigontig |
| 30. ðrītig         | 100. hund        |
| 40. fēowertig      | 200. twā hund    |
| 50. fiftig         | 1000. ðūsend     |
| 60. siextig        | 2000. twā ðūsend |
| 70. hundseofontig  |                  |

All these numbers are employed as neuter singular nouns, and are followed by the genitive plural: *Nāfde hē þeah mā ðonne twēntig hrýðera, and twēntig scēapa, and*

twēntig swȳna, *He did not have, however, more than twenty (of) cattle, and twenty (of) sheep, and twenty (of) swine*; Hīe hæfdon hundeahtatig scipa, *They had eighty ships*; twā hund mīla brād, *two hundred miles broad*; ðær wæron seofon hund gūðfanena genumen, *there were seven hundred standards captured*; ān ðūsend mōnna, *a thousand men*; Hannibales folces wæs twā ðūsend ofslagen, *Of Hannibal's men there were two thousand slain*; Hīe ācuron endlefan ðūsend mōnna, *They chose eleven thousand men*.

NOTE 1. — Group III is rarely inflected. Almost the only inflectional endings that are added are (1) *-es*, a genitive singular termination for the numerals in *-tig*, and (2) *-e*, a dative singular for *hund*. (1) The first is confined to adjectives expressing extent of space or time, as, *eald*, *old*; *brād*, *broad*; *hēah*, *high*; and *lōng*, *long*: *Ðæt is ðrītiges mīla lōng*, *that is thirty miles long*; *Hē wæs ðrītiges gēara eald*, *He was thirty years old*. (2) The second is employed after *mid*: *mid twāem hunde scipa*, *with two hundred ships*; *mid ðrīm hunde mōnna*, *with three hundred men*; *Ðær wearð . . . Regulus gefangen mid V hunde mōnna*, *There was Regulus captured with five hundred men*.

The statement made in nearly all the grammars that *hund* occurs as a nominative and accusative plural is without foundation.

NOTE 2. — Many numerals, otherwise indeclinable, are used in the genitive plural with the indefinite pronoun *sum*, which then means *one of a certain number*. In this peculiar construction, the numeral always precedes *sum*: *fēowera sum*, *one of four (= with three others)*; *Hē sǣde þæt hē syxa sum ofslōge syxtig*, *He said that he, with five others, slew sixty (whales)*; *Hē wæs fēowertigra sum*, *He was one of forty*.

NOTE 3. — These are the most common constructions with the Cardinals. The forms in *-tig* have only recently been investigated. A study of Wūlfing's citations shows that Alfred occasionally uses the forms in *-tig* (1) as adjectives with plural inflections: *mid XXXgum cyningum*, *with thirty kings*; and (2) as nouns with plural inflections: *æfter siextigum daga*, *after sixty days*. But both constructions are rare.

## (b) Ordinals.

92. The Ordinals, except the first two, are formed from the Cardinals. They are:

|                          |                       |
|--------------------------|-----------------------|
| 1. forma, æresta, fyrsta | 11. ęndleſta          |
| 2. oðer, æfterra         | 12. twelfta           |
| 3. ðridda                | 13. ðreotēoða         |
| 4. fēorða                | 14. fēowertēoða       |
| 5. fifta                 | 15. fiftēoða          |
| 6. siexta                | etc.                  |
| 7. seofoða               | 20. twēntigoða        |
| 8. eahtoða               | 21. ān qnd twēntigoða |
| 9. nigoða                | 30. ðritigoða         |
| 10. tēoða                | etc.                  |

NOTE.—There are no Ordinals corresponding to **hund** and **ðūsend**.

With the exception of **oðer** (§ 77), all the Ordinals are declined as Weak Adjectives; the article, however, as in Mn.E., is frequently omitted: **Brūtus wæs sē forma consul**, *Brutus was the first consul*; **Hēr ęndað sēo æreste bōc, qnd onginneð sēo oðer**, *Here the first book ends, and the second begins*; **ðy fiftan dæge**, *on the fifth day*; **on ðæm tēoðan gēare hiera gewinnes**, *in the tenth year of their strife*; **Hēo wæs twelfte**, *She was twelfth*; **Sē wæs fēorða from Augusto**, *He was fourth from Augustus*.

## CHAPTER XVI.

## ADVERBS, PREPOSITIONS, AND CONJUNCTIONS.

## Adverbs.

93. (1) Adverbs are formed by adding **-e** or **-lice** to the corresponding adjectives: **sōð**, *true*; **sōðe** or **sōðlice**, *truly*; **earmlīc**, *wretched*; **earmlīce**, *wretchedly*; **wīd**,

*wide*; **wīde**, *widely*; **micel**, *great*; **micle** (**micele**), *greatly*, *much*.

(2) The terminations **-e** and **-lice** are replaced in some adverbs by **-(1)unga** or **-(1)inga**: **eallunga**, *entirely*; **fāringa**, *suddenly*; **grundlunga**, *from the ground, completely*.

NOTE 1.—In Mn.E. *headlong, darkling, and groveling*, originally adverbs, we have survivals of these endings.

(3) The genitive case is frequently used adverbially: **sūðewardes**, *southwards*; **ealles**, *altogether, entirely*; **dægēs**, *by day*; **nihtes**, *by night*; **ðæs**, *from that time, afterwards*. Cf. **hys** (= **his**) **weges** in **Ðonne rideð ælc hys wegēs**, *Then rides each his way*.

NOTE 2.—The adverbial genitive is abundantly preserved in Mn.E. *Always, crossways, sideways, needs* (= *necessarily*), *sometimes*, etc., are not plurals, but old genitive singulars. The same construction is seen in *of course, of a truth, of an evening, of old, of late*, and similar phrases.

(4) Dative and instrumental plurals may be used as adverbs: **hwīlum**, *at times, sometimes* [*whilom*]; **stundum** (**stund** = *period*), *from time to time*; **miclum**, *greatly*. Especially common is the suffix **-mælum** (**mæ**l = *time, measure* [*meal*]), preserved adverbially in Mn.E. *piece-meal*: **dropmælum**, *drop by drop*; **styccemælum** (**stycce** = *piece*), *piecemeal, here and there*.

(5) The suffix **-an** usually denotes motion from:

**hēr**, *here*.

**ðær**, *there*.

**hwær**, *where?*

**hider**, *hither*.

**ðider**, *thither*.

**hwider**, *whither?*

**heonan**, *hence*.

**ðonan**, *thence*.

**hwonan**, *whence?*

**norðan**, *from the north*.

**ēastan**, *from the east*.

**hindan**, *from behind*.

**feorran**, *from far*.

**ūtan**, *from without*.

(6) The adverb *rihte* (*riht*=*right, straight*) denotes *motion toward* in *norðrihte, northward, due north*; *ēastrihte, due east*; *sūðrihte, due south*; *westrihte, due west*.

### Prepositions.

94. The nominative is the only case in O.E. that is never governed by a preposition. Of the other cases, the dative and accusative occur most frequently with prepositions.

(1) The prepositions that are most frequently found with the dative are:

|                                    |                               |
|------------------------------------|-------------------------------|
| <i>æfter, after.</i>               | <i>from (fram), from, by.</i> |
| <i>æt, at.</i>                     | <i>mid, with.</i>             |
| <i>be (bī), by, near, about.</i>   | <i>of, of, from.</i>          |
| <i>betwēonan (betuh), between.</i> | <i>tō, to.</i>                |
| <i>būtan (būton), except.</i>      | <i>tōforan, before.</i>       |
| <i>for, for.</i>                   | <i>tōweard, toward.</i>       |

(2) The following prepositions require the accusative:

|                                     |  |
|-------------------------------------|--|
| <i>geond, throughout [be-yond].</i> | <i>ðurh, through.</i>                              |
| <i>ofer, over, upon.</i>            | <i>ymbe, about, around [um-while, ember-days].</i> |
| <i>oð, until, up to.</i>            |  |

(3) The preposition *on* (rarely *in*), meaning *into*, is usually followed by the accusative; but meaning *in, on, or during*, it takes the dative or instrumental. The preposition *wið*, meaning *toward*, may be followed by the genitive, dative, or accusative; but meaning *against*, and implying *motion or hostility*, the accusative is more common.

(4) The following phrases are used prepositionally with the dative:

be norðan, north of.  
 be ēastan, east of.  
 be sūðan, south of.  
 be westan, west of.

tō ēacan, in addition to.  
 on emnlange (efn-lang = evenly long), along.  
 tō emnes, along.

(5) Prepositions regularly precede the noun or pronoun that they introduce; but by their adverbial nature they are sometimes drawn in front of the verb: **And him wæs mycel mēnegu tō gegaderod**, *And there was gathered unto him a great multitude.* In relative clauses introduced by ðe, the preceding position is very common: **sēo scīr . . . ðe hē on būde**, *the district, . . . which he dwelt in (= which he in-habited)*; **Hē wæs swyðe spēdig man on ðæm æhtum ðe hiera spēða on bēoð**, *He was a very rich man in those possessions which their riches consist in*; **nȳhst ðæm tūne ðe sē dēada man on lið**, *nearest the town that the dead man lies in.*

**Conjunctions.**

95. (1) The most frequently occurring conjunctions are:

|                                     |            |                        |
|-------------------------------------|------------|------------------------|
| ac, but.                            |            | for ðȳ, therefore.     |
| æf, before, ere.                    |            | gif, if.               |
| būtan (būton), except that, unless. |            | hwæðer, whether.       |
| ēac, also [eke].                    |            | ond (and), and.        |
| for ðæm                             | } because. | oððe, or.              |
| for ðæm ðe,                         |            | ðæt, that, so that.    |
| for ðon,                            |            | ðēah, though, however. |
| for ðon ðe,                         |            |                        |

(2) The correlative conjunctions are:

|                        |                        |
|------------------------|------------------------|
| ægðer ge . . . . . ge, | both . . . . . and.    |
| ægðer . . . . . oððer  | } either . . . . . or. |
| oððe . . . . . oððe    |                        |

|                 |       |                      |                    |
|-----------------|-------|----------------------|--------------------|
| nē . . . . .    | nē,   | neither . . . . .    | nor.               |
| sam . . . . .   | sam,  | whether . . . . .    | or.                |

| ðā . . . . .    | ðā    | } when . . . . .     | then.              |
| ðonne . . . . . | ðonne |                      |                    |

## CHAPTER XVII.

### COMPARISON OF ADJECTIVES AND ADVERBS.

#### Adjectives.

96. (1) Adjectives are regularly compared by adding *-ra* for the comparative, and *-ost* (rarely *-est*) for the superlative :

| <i>Positive.</i>    | <i>Comparative.</i> | <i>Superlative.</i> |
|---------------------|---------------------|---------------------|
| earn, <i>poor</i>   | earnra              | earnost             |
| rice, <i>rich</i>   | ricra               | ricost              |
| smæl, <i>narrow</i> | smælra              | smalost             |
| brād, <i>broad</i>  | brādra (brædra)     | brādost             |
| swift, <i>swift</i> | swiftra             | swiftost            |

(2) Forms with *i*-umlaut usually have superlative in *-est* :

| <i>Positive.</i>      | <i>Comparative.</i> | <i>Superlative.</i> |
|-----------------------|---------------------|---------------------|
| eald, <i>old</i>      | ieldra              | ieldest             |
| lōng, <i>long</i>     | lēngra              | lēngest             |
| strōng, <i>strong</i> | strēngra            | strēngest           |
| geong, <i>young</i>   | giengra             | giengest            |
| hēah, <i>high</i>     | hīerra              | hīehst              |

(3) The following adjectives are compared irregularly :

| <i>Positive.</i>     | <i>Comparative.</i> | <i>Superlative.</i> |
|----------------------|---------------------|---------------------|
| gōd, good            | bētra               | bēst                |
| lȳtel, little, small | lāssa               | lāst                |
| micel, great, much   | māra                | māst                |
| yfel, bad            | wiersa              | wierst              |

(4) The positive is sometimes supplied by an adverb:

| <i>Positive.</i> | <i>Comparative.</i> | <i>Superlative.</i> |
|------------------|---------------------|---------------------|
| feor, far        | fierra              | fierrest            |
| nēah, near       | nēarra              | nīehst              |
| æ̅r, before      | æ̅rra, former       | æ̅rest, first       |

(5) The comparatives all follow the Weak Declension. The superlatives, when preceded by the definite article, are weak; but when used predicatively they are frequently strong: *sē lāesta dæl, the least part; Ðonne cymeð sē man sē ðæt swiftoste hors hafað tō ðæm ærestan dæle and tō ðæm mæstan, Then comes the man that has the swiftest horse to the first part and to the largest.* But, *ðæt bȳne land is ēasteward brādost (not brādoste), the cultivated land is broadest eastward; and (hit) bið ealra wyrta mæst, and it is largest of all herbs; Ac hyra (= hiera) ār is mæst on ðæm gafole ðe ðā Finnas him gyldað, But their income is greatest in the tribute that the Fins pay them.*

(6) The comparative is usually followed by ðonne and the nominative case: *Sē hwæl bið micle lāssa ðonne ððre hwalas, That whale is much smaller than other whales; Ðā wunda ðæs mōdes bēoð ðigelran ðonne ðā wunda ðæs lichaman, The wounds of the mind are more secret than the wounds of the body.*

But when ðonne is omitted, the comparative is followed by the dative: *Ūre Āllesend, ðe māra is qnd*

*mærra eallum gesceaftum, Our Redeemer, who is greater and more glorious than all created things; nē ongeat hē nō hiene selfne bętran oðrum gōdum mōnnum, nor did he consider himself better than other good men.*

### Adverbs.

97. (1) Adverbs are regularly compared by adding -or for the comparative and -ost (rarely -est) for the superlative :

| <i>Positive.</i>      | <i>Comparative.</i> | <i>Superlative.</i>    |
|-----------------------|---------------------|------------------------|
| georne, willingly     | geornor             | geornost               |
| swiðe, very, severely | swiðor, more        | swiðost, most, chiefly |
| æf, before            | æror, formerly      | ærest, first           |
| norð, northwards      | norðor              | norðmest <sup>1</sup>  |

(2) The comparatives of a few adverbs may be found by dropping -ra of the corresponding adjective form :

| <i>Positive.</i> | <i>Comparative.</i> | <i>Superlative.</i> |
|------------------|---------------------|---------------------|
| lōnge, long      | lēng                | lēngest             |
| micle, much      | mā                  | māest               |
| wel, well        | bęt                 | bętst               |

### Expressions of Time.

98. (1) Duration of time and extent of space are usually expressed by the accusative case: *Ealle ðā hwīle ðe ðæt līc bið inne, All the time that the body is within; twēgen dagas, for two days; ealne weg, all the way, always.*

<sup>1</sup> This is really a double superlative, *m* being itself an old superlative suffix. Cf. Latin *opti-m-us*. In Mn. E. *northmost* and *hindmost*, -*m-est* has been confused with -*most*, with which etymologically it has nothing to do.

(2) Time when is more often expressed by the instrumental case when no preposition is used: *ðy ilcan dæge, the same day; ælce gēare, each year; ðy gēare, that year; ælce dæge, each day.*

(3) Time or space within which is expressed by *on* and the dative: *on sumera, in summer; on wintra, in winter; on fif dagum, in five days; on fif mīlum, in five miles; on ðissum gēare, in this year; on ðæm tīman, in those times.* Sometimes by the genitive without a preceding preposition: *ðæs gēares, in that year.*

This man's son is both wiser and better than his father. 8. When the king rides, then ride his thanes also. 9. The richest men are not always (**a**) the wisest men.

## CHAPTER XVIII.

### STRONG VERBS: CLASS I. (See § 17.)

#### Syntax of Moods.

**101.** Of the three hundred simple verbs belonging to the O.E. Strong Conjugation, it is estimated<sup>1</sup> that seventy-eight have preserved their strong inflections in Mn.E., that eighty-eight have become weak, and that the remaining one hundred and thirty-four have entirely disappeared, their places being taken in most cases by verbs of Latin origin introduced through the Norman-French.

---

<sup>1</sup> Lounsbury, *English Language*, Part II, § 241.

NOTE.—Only the simple or primitive verbs, not the compound forms, are here taken into consideration. The proportionate loss, therefore, is really much greater. O.E. abounded in formative prefixes. “Thus from the Anglo-Saxon *flōwan*, to *flow*, ten new compounds were formed by the addition of various prefixes, of which ten, only one, *oferflōwan*, to *overflow*, survives with us. In a similar manner, from the verb *sittan*, to *sit*, thirteen new verbs were formed, of which not a single one is to be found to-day.” Lounsbury, *ib.* Part I, p. 107.

**102. Class I: The “Drive” Conjugation.**

Vowel Succession: *ī, ā, i, i.*

## Tense Formation of Strong Verbs.

**103.** (1) It will be seen from the conjugation of *drīfan* that the *present stem* in all strong verbs is used throughout the present indicative, the present subjunctive, the imperative, the infinitive, the gerund, and the present participle. More than half of the endings, therefore, of the Strong Conjugation are added directly to the present stem.

(2) That the *preterit singular stem* is used in only two forms of the verb, the 1st and 3d persons singular of the preterit indicative:  **Ic *drāf*, *hē drāf*.**

(3) That the *preterit plural stem* is used in the preterit plural indicative, in the second person of the preterit singular indicative, and in the singular and plural of the preterit subjunctive.

(4) That the *stem of the past participle* (*gedrif-*) is used for no other form.

## Syntax of the Verb.

**104.** The Indicative Mood<sup>1</sup> represents the predicate *as a reality*. It is used both in independent and in dependent clauses, its function in O.E. corresponding with its function in Mn.E.

**105.** The Subjunctive Mood represents the predicate *as an idea*.<sup>2</sup> It is of far more frequent occurrence in O.E. than in Mn.E.

<sup>1</sup> Usage sanctions *mood*, but the better spelling would be *mode*. It is from the Lat. *modus*, whereas *mood* (= *temper*) is O.E. *mōd*.

<sup>2</sup> Gildersleeve's *Latin Grammar*, § 255.

1. When used in independent clauses it denotes desire, command, or entreaty, and usually precedes its subject: *Sīe ðīn nama gehālgod, Hallowed be Thy name; Ne swerigen gē, Do not swear.*

2. In dependent clauses it denotes uncertainty, possibility, or mere futurity.<sup>1</sup> (a) Concessive clauses (introduced by *ðēah, though*) and (b) temporal clauses (introduced by *ær, ær ðæm ðe, before*) are rarely found with any other mood than the subjunctive. The subjunctive is also regularly used in Alfredian prose (c) after verbs of saying, even when no suggestion of doubt or discredit attaches to the narration.<sup>2</sup> "Whether the statement refer to a fact or not, whether the subject-matter be vouched for by the reporter, as regards its objective reality and truth, the subjunctive does not tell. It simply represents a statement as reported"<sup>3</sup>: *ðēah man āsette twēgen fætels full ealað oððe wæteres, though one set two vessels full of ale or water; ær ðæm ðe hit eall forhergod wære, before it was all ravaged; Hē sæde ðæt Norðmanna land wære swyðe lang and swyðe smæl, He said that the Norwegians' land was very long and very narrow.*

---

<sup>1</sup> Thus when Alfred writes that an event took place *before* the founding of Rome, he uses the subjunctive: *ær ðæm ðe Rōmeburh getimbrod wære = before Rome were founded*; but, *æfter ðæm ðe Rōmeburh getimbrod wæs = after Rome was founded.*

<sup>2</sup> "By the time of Ælfric, however, the levelling influence of the indicative [after verbs of saying] has made considerable progress." — Gorrell, *Indirect Discourse in Anglo-Saxon* (Dissertation, 1895), p. 101.

<sup>3</sup> Hotz, *On the Use of the Subjunctive Mood in Anglo-Saxon* (Zürich, 1882).

**106.** The Imperative is the mood of command or intercession : *Iōhannes, cum tō mē, John, come to me; And forgyf ūs ūre gyltas, And forgive us our trespasses; Ne drif ūs fram ðē, Do not drive us from thee.*

**107.** (1) The Infinitive and Participles are used chiefly in verb-phrases (§§ 138–141); but apart from this function, the Infinitive, being a neuter noun, may serve as the subject or direct object of a verb. *Hātan* (to command, bid), *lāetan* (to let, permit), and *onginnan* (to begin) are regularly followed by the Infinitive: *Hine rīdan lyste, To ride pleased him; Hēt ðā bære sættan, He bade set down the bier;<sup>1</sup> Lāetað ðā lýtlingas tō mē cuman, Let the little ones come to me; ðā ongann hē sprecan, then began he to speak.*

(2) The Participles may be used independently in the dative absolute construction (an imitation of the Latin ablative absolute), usually for the expression of time:<sup>2</sup> *Him ðā gýt sprecendūm, While he was yet speaking; gefylledūm dagum, the days having been fulfilled.*

**108.** The Gerund, or Gerundial Infinitive, is used:

(1) To express purpose: *Ūt ēode sē sāwere his sǣd tō sāwenne, Out went the sower his seed to sow.*

(2) To expand or determine the meaning of a noun or adjective: *Sýmōn, ic hæbbe ðē tō sæcgenne sum ðing, Simon, I have something to say to thee; Hit is scōndlic ymb swelc tō sprecanne, It is shameful to speak about such things.*

<sup>1</sup> Not, *He commanded the bier to be set down.* The Mn.E. passive in such sentences is a loss both in force and directness.

<sup>2</sup> Callaway, *The Absolute Participle in Anglo-Saxon* (Dissertation, 1889), p. 19.

(3) After *bēon* (*wesan*) to denote duty or necessity: *Hwæt is nū mā ymbe ðis tō sprecanne, What more is there now to say about this? ðonne is tō geðencenne hwæt Crīst self cwæð, then it behooves to bethink what Christ himself said.*

NOTE.—The Gerund is simply the dative case of the Infinitive after *tō*. It began very early to supplant the simple Infinitive; hence the use of *to* with the Infinitive in Mn.E. As late as the Elizabethan age the Gerund sometimes replaced the Infinitive even after the auxiliary verbs:

“Some pagan shore,  
Where these two Christian armies *might combine*  
The blood of malice in a vein of league,  
And not *to spend* it so unneighbourly.”

—*King John*, V, 2, 39.

When *to* lost the meaning of purpose and came to be considered as a merely formal prefix, *for* was used to supplement the purpose element: *What went ye out for to see?*<sup>1</sup>

---

<sup>1</sup> This is not the place to discuss the Gerund in Mn.E., the so-called “infinitive in *-ing*.” The whole subject has been befogged for the lack of an accepted nomenclature, one that shall do violence neither to grammar nor to history.

<sup>1</sup> A few verbs of Class II have ū instead of ēo in the infinitive:

brūcan, brēac, brucon, gebrocen, *to enjoy* [brook].

būgan, bēag, bugon, gebogen, *to bend, bow*.

<sup>2</sup> By a law known as Grammatical Change, final ǫ, s, and h of strong verbs generally become ǫ, r, and g, respectively, in the preterit plural and past participle.

## 110. Class III: The "Bind" Conjugation.

Vowel Succession:  $\left. \begin{matrix} i \\ e \end{matrix} \right\}, a, u, \left. \begin{matrix} u \\ o \end{matrix} \right\}$ .

The present stem ends in **m**, **n**, **l**, **r**, or **h**, + one or more consonants:

|            |            |   |            |            |            |
|------------|------------|---|------------|------------|------------|
| <b>m</b> : | belimp-an, | $\left\{ \begin{matrix} \text{belomp} \\ \text{belamp} \end{matrix} \right\}$ , | belump-on, | belump-en, | to belong. |
| <b>n</b> : | bind-an,   | $\left\{ \begin{matrix} \text{bōnd} \\ \text{band} \end{matrix} \right\}$ ,     | bund-on,   | gebund-en, | to bind.   |
| <b>l</b> : | help-an,   | healp,  | hulp-on,   | geholp-en, | to help.   |
| <b>r</b> : | weorð-an,  | wearð,  | wurd-on,   | geword-en, | to become. |
| <b>h</b> : | gefeht-an, | gefeht,   | gefuht-on, | gefoht-en, | to fight.  |

NOTE 1.—If the present stem ends in a nasal (**m**, **n**) + a consonant, the past participle retains the **u** of the pret. plur.; but if the present stem ends in a liquid (**l**, **r**) or **h**, + a consonant, the past participle has **o** instead of **u**.

NOTE 2.—Why do we not find \***halp**, \***warð**, and \***faht** in the pret. sing.? Because **a** before **l**, **r**, or **h**, + a consonant, underwent "breaking" to **ea**. Breaking also changes every **e** followed by **r** or **h**, + a consonant, to **eo**: **weorðan** (< \***werðan**), **fehtan** (< \***fehtan**).

## CHAPTER XX.

STRONG VERBS: CLASSES IV, V, VI, AND VII.  
CONTRACT VERBS.

[The student can now complete the conjugation for himself (§ 103). Only the principal parts will be given.]

**114.** Class IV: The "Bear" Conjugation.

Vowel Succession: e, æ,  $\bar{a}$ , o.

The present stem ends in l, r, or m, no consonant following:

|    |              |                   |                       |
|----|--------------|-------------------|-----------------------|
| l: | hel-an, hæl, | h $\bar{a}$ l-on, | gehol-en, to conceal. |
| r: | ber-an, bær, | b $\bar{a}$ r-on, | gebor-en, to bear.    |

The two following verbs are slightly irregular:

|    |  |
|----|--|
| m: | { nim-an, nōm (nam), nōm-on (nām-on), genum-en, to take. |
|    | { cum-an, c(w)ōm, c(w)ōm-on, gecum-en, to come.          |

**115.** Class V: The "Give" Conjugation.

Succession of Vowels: e (ie), æ,  $\bar{a}$ , e.

The present stem ends in a single consonant, never a liquid or nasal:

|                |                     |                             |
|----------------|---------------------|-----------------------------|
| met-an, mæt,   | m $\bar{a}$ eton,   | gemet-en, to measure, mete. |
| gief-an, geaf, | g $\bar{e}$ aef-on, | gegief-en, to give.         |

NOTE 1. — The palatal consonants, g, c, and sc, convert a following e into ie, æ into ea, and  $\bar{a}$  into  $\bar{e}$ a. Hence giefan (<\*gefan), geaf (<\*gæf), g $\bar{e}$ aefon (<\*g $\bar{a}$ efon), gegiefen (<\*gegefen). This change is known as Palatalization. See § 8.

NOTE 2. — The infinitives of the following important verbs are only apparently exceptional:

|              |                    |                             |
|--------------|--------------------|-----------------------------|
| biddan, bæd, | b $\bar{a}$ ed-on, | gebed-en, to ask for [bid]. |
| licgan, læg, | l $\bar{a}$ eg-on, | geleg-en, to lie, extend.   |
| sittan, sæt, | s $\bar{a}$ et-on, | geset-en, to sit.           |

The original **e** reappears in the participial stems. It was changed to **i** in the present stems on account of a former **-jan** in the infinitive (**bid-jan**, etc.). See § 61. To the same cause is due the doubling of consonants in the infinitive. All simple consonants in O.E., with the exception of **r**, were doubled after a short vowel, when an original **j** followed.

### 116. Class VI: The "Shake" Conjugation.

Succession of Vowels: **a, ǫ, ȝ, a.**

|                 |              |                 |                   |                      |
|-----------------|--------------|-----------------|-------------------|----------------------|
| <b>scac-an,</b> | <b>scōc,</b> | <b>scōc-on,</b> | <b>gescac-en,</b> | <i>to shake.</i>     |
| <b>far-an,</b>  | <b>fōr,</b>  | <b>fōr-on,</b>  | <b>gefar-en,</b>  | <i>to go [fare].</i> |

### 117. Class VII: The "Fall" Conjugation.

Vowel Succession:  $\left. \begin{array}{l} \bar{a} \\ \bar{æ} \end{array} \right\}, \bar{e}, \bar{e}, \left. \begin{array}{l} \bar{a} \\ \bar{æ} \end{array} \right\};$  or  $\left. \begin{array}{l} ea \\ \bar{e}a \\ \bar{o} \end{array} \right\}, \bar{e}o, \bar{e}o, \left. \begin{array}{l} ea \\ \bar{e}a \\ \bar{o} \end{array} \right\}.$

- |     |                  |               |                  |                    |   |
|-----|------------------|---------------|------------------|--------------------|---|
| (1) | <b>hāt-an,</b>   | <b>hēt,</b>   | <b>hēt-on,</b>   | <b>gehāt-en,</b>   | $\left\{ \begin{array}{l} \textit{to call, name,} \\ \textit{command.} \end{array} \right.$ |
|     | <b>lāet-an,</b>  | <b>lēt,</b>   | <b>lēt-on,</b>   | <b>gelāet-en,</b>  | <i>to let.</i>  |
| (2) | <b>feall-an,</b> | <b>fēoll,</b> | <b>fēoll-on,</b> | <b>gefeall-en,</b> | <i>to fall.</i>   |
|     | <b>heald-an,</b> | <b>hēold,</b> | <b>hēold-on,</b> | <b>geheald-en,</b> | <i>to hold.</i>   |
|     | <b>hēaw-an,</b>  | <b>hēow,</b>  | <b>hēow-on,</b>  | <b>gehēaw-en,</b>  | <i>to hew.</i>  |
|     | <b>grōw-an,</b>  | <b>grēow,</b> | <b>grēow-on,</b> | <b>gegrōw-en,</b>  | <i>to grow.</i>   |

NOTE 1. — This class consists of the Reduplicating Verbs; that is, those verbs that originally formed their preterits not by internal vowel change (ablaut), but by prefixing to the present stem the initial consonant + **e** (cf. Gk. λέ-λοιπα and Lat. *dě-di*). Contraction then took place between the syllabic prefix and the root, the fusion resulting in  $\bar{e}$  or  $\bar{e}o$ : \***he-hat** > **heht** > **hēt**.

NOTE 2. — A peculiar interest attaches to **hātan**: the forms **hätte** and **hātton** are the sole remains in O.E. of the original Germanic passive. They are used both as presents and as preterits: **hätte** = *I am* or *was called, he is* or *was called*. No other verb in O.E. could have a passive sense without calling in the aid of the verb *to be* (§ 141).

## Contract Verbs.

**118.** The few Contract Verbs found in O.E. do not constitute a new class; they fall under Classes I, II, V, VI, and VII, already treated. The present stem ended originally in *h*. This was lost before *-an* of the infinitive, contraction and compensatory lengthening being the result. The following are the most important of these verbs:

Classes.

- I. *ðēon* (<\**ðīhan*), *ðāh*, *ðig-on*, { *geðig-en*  
*geðung-en* }, *to thrive*.
- II. *tēon* (<\**tēohan*), *tēah*, *tug-on*, *getog-en*, *to draw, go*  
 [tug].
- V. *sēon* (<\**sehwan*), *seah*, *sāw-on*, *gesew-en*, *to see*.
- VI. *slēan* (<\**slahan*), *slōh*, *slōg-on*, *geslæg-en*, *to slay*.
- VII. *fōn* (<\**fōhan*), *fēng*, *fēng-on*, *gefōng-en*, *to seize*  
 [fang].

**119.** The Present Indicative of these verbs runs as follows (see rules of *i*-umlaut, § 58):

|              |    |            |               |               |               |                |              |

|              | 3. | <i>hie</i> |               |               |               |                |              |

The other tenses and moods are regularly formed from the given stems.

 9. About six months afterwards, Alfred gained the victory, and came to the throne.    10. He said that there was very great slaughter on both sides.

## CHAPTER XXI.

### WEAK VERBS (§ 18).

**122.** The verbs belonging to the Weak Conjugation are generally of more recent origin than the strong verbs, being frequently formed from the roots of strong verbs. The Weak Conjugation was the growing conjugation in O.E. as it is in Mn.E. We instinctively put our newly coined or borrowed words into this conjugation (*telegraphed, boycotted*); and children, by the analogy of weak verbs, say *runned* for *ran*, *seed* for *saw*, *teared* for *tore*, *drawed* for *drew*, and *growed* for *grew*. So, for example, when Latin *dictāre* and *breviāre* came into O.E., they came as weak verbs, *dihtian* and *brēfian*.

#### The Three Classes of Weak Verbs.

**123.** There is no difficulty in telling, from the infinitive alone, to which of the three classes a weak verb belongs. Class III has been so invaded by Class II

that but three important verbs remain to it: **habban**, *to have*; **libban**, *to live*; and **sęcgan**, *to say*. Distinction is to be made, therefore, only between Classes II and I. Class II contains the verbs with infinitive in **-ian** not preceded by **r**. Class I contains the remaining weak verbs; that is, those with infinitive in **-r-ian** and those with infinitive in **-an** (not **-ian**).

### Class I.

**124.** The preterit singular and past participle of Class I end in **-ede** and **-ed**, or **-de** and **-ed** respectively.

NOTE. — The infinitives of this class ended originally in **-jan** (= **-ian**). This accounts for the prevalence of **i**-umlaut in these verbs, and also for the large number of short-voweled stems ending in a double consonant (§ 115, Note 2). The weak verb is frequently the causative of the corresponding strong verb. In such cases, the root of the weak verb corresponds in form to the preterit singular of the strong verb: Mn.E. *drench* (= *to make drink*), *lay* (= *to make lie*), *rear* (= *to make rise*), and *set* (= *to make sit*), are the umlauted forms of **drōnc** (preterit singular of **drincan**), **læg** (preterit singular of **licgan**), **rās** (preterit singular of **rīsan**), and **sæt** (preterit singular of **sittan**).

### Preterit and Past Participle in **-ede** and **-ed**.

**125.** Verbs with infinitive in **-an** preceded by **ri-** or the double consonants **mm**, **nn**, **ss**, **bb**, **cg** (= **gg**), add **-ede** for the preterit, and **-ed** for the past participle, the double consonant being always made single:

|            |                  |                  |                   |                            |
|------------|------------------|------------------|-------------------|----------------------------|
| <b>ri:</b> | <b>nęri-an,</b>  | <b>nęr-ede,</b>  | <b>genęr-ed,</b>  | <i>to save.</i>            |
| <b>mm:</b> | <b>fřemm-an,</b> | <b>fřem-ede,</b> | <b>gefřem-ed,</b> | <i>to perform [frame].</i> |
| <b>nn:</b> | <b>đęnn-an,</b>  | <b>đęn-ede,</b>  | <b>geđęn-ed,</b>  | <i>to extend.</i>          |
| <b>ss:</b> | <b>cnyss-an,</b> | <b>cnys-ede,</b> | <b>gecnys-ed,</b> | <i>to beat.</i>            |

bb: swębb-an, swęf-ede, geswęf-ed, *to put to sleep.*  
 cg: węc-g-an, węc-ede, gewęc-g-ed, *to agitate.*

NOTE.—*Lęcgan*, *to lay*, is the only one of these verbs that syncope the *e*: *lęcgan*, *lęcde* (*lēde*), *gełęcđ* (*gelēđ*), instead of *lęcede*, *gełęced*.

### Preterit and Past Participle in *-de* and *-ed*.

126. All the other verbs belonging to Class I. add *-de* for the preterit and *-ed* for the past participle. This division includes, therefore, all stems long by nature (§ 10, (3), (a)):

|          |          |            |                                   |
|----------|----------|------------|-----------------------------------|
| dǣl-an,  | dǣl-de,  | gedǣl-ed,  | <i>to deal out, divide</i> [dǣl]. |
| dēm-an,  | dēm-de,  | gedēm-ed,  | <i>to judge</i> [dōm].            |
| grēt-an, | grēt-te, | gegrēt-ed, | <i>to greet.</i>                  |
| hīer-an, | hīer-de, | gehīer-ed, | <i>to hear.</i>                   |
| lǣd-an,  | lǣd-de,  | gelǣd-ed,  | <i>to lead.</i>                   |

NOTE 1.—A preceding voiceless consonant (§ 9, Note) changes *-de* into *-te*: \*grēt-de > grēt-te; \*mēt-de > mēt-te; \*īec-de > īec-te. Syncope and contraction are also frequent in the participles: *gegrēt-ed* > \**gegrēt-d* > *gegrēt(t)*; *gelǣd-ed* > *gelǣd(d)*.

NOTE 2.—*Būan*, *to dwell, cultivate*, has an admixture of strong forms in the past participle: *būan*, *būde*, *gebūd* (*bȳn*, *gebūn*). The present participle survives in Mn.E. *husband* = *house-dweller*.

127. It includes, also, all stems long by position (§ 10, (3), (b)) except those in *mm*, *nn*, *ss*, *bb*, and *cg* (§ 125):

|           |          |             |                         |
|-----------|----------|-------------|-------------------------|
| sęnd-an,  | sęnd-e,  | gesęnd-ed,  | <i>to send.</i>         |
| sętt-an,  | sęt-te,  | gesęt-ed,   | <i>to set</i> [sittan]. |
| sigl-an,  | sigl-de, | gesigl-ed,  | <i>to sail.</i>         |
| spęnd-an, | spęnd-e, | gespęnd-ed, | <i>to spend.</i>        |
| trędd-an, | tręd-de, | getręd-ed,  | <i>to tread.</i>        |

NOTE.—The participles frequently undergo syncope and contraction: *gesęnded* > *gesęnd*; *gesęted* > *gesęt(t)*; *gespęnded* > *gespęnd*; *getręded* > *getręd(d)*.

## Irregular Verbs of Class I.

**128.** There are about twenty verbs belonging to Class I that are irregular in having no umlaut in the preterit and past participle. The preterit ends in *-de*, the past participle in *-d*; but, through the influence of a preceding voiceless consonant (§ 9, Note), *-ed* is generally unvoiced to *-te*, and *-d* to *-t*. The most important of these verbs are as follows:

|           |          |           |                           |
|-----------|----------|-----------|---------------------------|
| bring-an, | brōh-te, | gebrōh-t, | to bring.                 |
| byc-gan,  | boh-te,  | geboh-t,  | to buy.                   |
| sēc-an,   | sōh-te,  | gesōh-t,  | to seek.                  |
| sęll-an,  | seal-de, | geseal-d, | to give, sell [hand-sel]. |
| tāc-an,   | tāh-te,  | getāh-t,  | to teach.                 |
| tęll-an,  | teal-de, | geteal-d, | to count [tell].          |
| đęnc-an,  | đōh-te,  | geđōh-t,  | to think.                 |
| đync-an,  | đūh-te,  | geđūh-t,  | to seem [methinks].       |
| wyrc-an,  | worh-te, | geworh-t, | to work.                  |

NOTE. — Such of these verbs as have stems in *c* or *g* are frequently written with an inserted *e*: *bycgean*, *sēcean*, *tācean*, etc. This *e* indicates that *c* and *g* have palatal value; that is, are to be followed with a vanishing *y*-sound. In such cases, O.E. *c* usually passes into Mn.E. *ch*: *tāc(e)an* > *to teach*; *rāc(e)an* > *to reach*; *stręcc(e)an* > *stretch*. *Sēc(e)an* gives *beseech* as well as *seek*. See § 8.

NOTE. — The endings of the preterit present no difficulties; in the 2d and 3d singular present, however, the student will observe (a) that double consonants in the stem are made single: *fr̥mest*, *fr̥með* (not \**fr̥m̥mest*, \**fr̥m̥með*); *ð̥nest*, *ð̥neð*; *se̥test* (*se̥tst*), *se̥teð* (*se̥tt*); *fylst*, *fylð*, from *fyllan*, *to fill*; (b) that syncope is the rule in stems long by nature: *d̥ǣlst* (< *d̥ǣlest*), *d̥ǣlð* (< *d̥ǣleð*); *d̥ēmst* (< *d̥ēmest*), *d̥ēmð* (< *d̥ēmeð*); *h̥ierst* (< *h̥ierest*), *h̥ierð* (< *h̥iereð*). Double consonants are also made single in the imperative 2d singular and in the past participle. Stems long by nature take no final *-e* in the imperative: *d̥ǣl*, *h̥ier*, *d̥ēm*.

## Class II.

130. The infinitive of verbs belonging to this class ends in *-ian* (not *-r-ian*), the preterit singular in *-ode*, the past participle in *-od*. The preterit plural usually has *-edon*, however, instead of *-odon*:

|                    |                    |                     |                                    |
|--------------------|--------------------|---------------------|------------------------------------|
| <i>eard-ian</i>    | <i>eard-ode</i> ,  | <i>geard-od</i> ,   | <i>to dwell</i> [ <i>eorðe</i> ].  |

NOTE. — These verbs have no trace of original umlaut, since their *-ian* was once *-ōjan*. Hence, the vowel of the stem was shielded from the influence of the *j* (= *i*) by the interposition of *ō*.

## Conjugation of Class II.

|                 |             | tō lufianne (-enne) | gelufod             |

NOTE 1.—The **-ie** (**-ien**) occurring in the present must be pronounced as a dissyllable. The **y**-sound thus interposed between the **i** and **e** is frequently indicated by the letter **g**: **lufie**, or **lufige**; **lufien**, or **lufigen**. So also for **ia**: **lufiaǰ**, or **lufigaǰ**; **lufian**, or **lufig(e)an**.

NOTE 2.—In the preterit singular, **-ade**, **-ude**, and **-ede** are not infrequent for **-ode**.

### Class III.

**132.** The few verbs belonging here show a blending of Classes I and II. Like certain verbs of Class I (§ 128), the preterit and past participle are formed by adding **-de** and **-d**; like Class II, the 2d and 3d present indicative singular end in **-ast** and **-aǰ**, the imperative 2d singular in **-a**:

## CHAPTER XXII.

### REMAINING VERBS; VERB-PHRASES WITH **habban**, **bēon**, AND **weorðan**.

#### Anomalous Verbs. (See § 19.)

**134.** These are:

|                        |        |         |        |                         |
|------------------------|--------|---------|--------|-------------------------|
| bēon ( <i>wesan</i> ), | wæs,   | wæron,  | —,     | <i>to be.</i>           |
| willan,                | wolde, | woldon, | —,     | <i>to will, intend.</i> |
| dōn,                   | dyde,  | dydon,  | gedōn, | <i>to do, cause.</i>    |
| gān,                   | ēode,  | ēodon,  | gegān, | <i>to go.</i>           |

NOTE. — In the original Indo-Germanic language, the first person of the present indicative singular ended in (1) **ō** or (2) **mi**. Cf. Gk. *λύ-ω*, *ελ-μι*, Lat. *am-ō*, *su-m*. The Strong and Weak Conjugations of O.E. are survivals of the **ō**-class. The four Anomalous Verbs mentioned above are the sole remains in O.E. of the **mi**-class. Note the surviving **m** in **eom** *I am*, and **dōm** *I do* (Northumbrian form). These **mi**-verbs are sometimes called non-Thematic to distinguish them from the Thematic or **ō**-verbs.

Conjugation of Anomalous Verbs.

135. Only the present indicative and subjunctive are at all irregular:

Indicative.

| 3.              | hīe |      |        |     |     |

NOTE.—The preterit subjunctive of **bēon** is formed, of course, not from **wæs**, but from **wāeron**. See § 103, (3).

Preterit-Present Verbs. (See § 19.)

136. These verbs are called Preterit-Present because the present tense (indicative and subjunctive) of each of them is, in form, a strong preterit, the old present having been displaced by the new. They all have weak preterits. Most of the Mn.E. Auxiliary Verbs belong to this class.

|         |                      |         |                                  |                                  |
|---------|----------------------|---------|----------------------------------|----------------------------------|
| witan,  | { wiste,<br>wisse, } | wiston, | gewiten,                         | to know [to wit, wot].           |
| āgan,   | āhte,                | āhton,  | āgen (adj.),                     | to possess [owe].                |
| cunnan, | cūðe,                | cūðon,  | { gecunnen, }<br>{ cūð (adj.), } | to know, can [uncouþh, cunning]. |

|         |            |            |   |                  |
|---------|------------|------------|---|------------------|
| durran, | dorste,    | dorston,   | — | to dare.         |
| sculan, | sceolde,   | sceoldon,  | — | shall.           |
| magan,  | { meahthe, | meahton, } | — | to be able, may. |
|         | { mihte,   | mihton, }  |   |                  |
| mōtan,  | mōste,     | mōston,    | — | may, must.       |

NOTE. — The change in meaning from preterit to present, with retention of the preterit form, is not uncommon in other languages. Several examples are found in Latin and Greek (cf. *nōvi* and *ōīda*, *I know*). Mn.E. has gone further still: *āhte* and *mōste*, which had already suffered the loss of their old preterits (*āh*, *mōt*), have been forced back again into the present (*ought*, *must*). Having exhausted, therefore, the only means of preterit formation known to Germanic, the strong and the weak, it is not likely that either *ought* or *must* will ever develop distinct preterit forms.

NOTE 1.—*Willan* and *sculan* do not often connote simple futurity in Early West Saxon, yet they were fast drifting that way.

The Mn.E. use of *shall* only with the 1st person and *will* only with the 2d and 3d, to express simple futurity, was wholly unknown even in Shakespeare's day. The elaborate distinctions drawn between these words by modern grammarians are not only cumbersome and foreign to the genius of English, but equally lacking in psychological basis.

NOTE 2. — **Sculan** originally implied the idea of (1) *duty*, or *compulsion* (= *ought to*, or *must*), and this conception lurks with more or less prominence in almost every function of **sculan** in O.E. : **Dryhten bebēad Moyses hū hē sceolde beran ðā earce**, *The Lord instructed Moses how he ought to bear the ark*; **Ælc mann sceal be his andgietes mæðe . . . sprecað ðæt he spricð, and dōn ðæt ðæt hē dēð**, *Every man must, according to the measure of his intelligence, speak what he speaks, and do what he does*. Its next most frequent use is to express (2) *custom*, the transition from the obligatory to the customary being an easy one : **Sē byrdesta sceall gyldan fiftýne mearðes fell**, *The man of highest rank pays fifteen marten skins*.

NOTE 3. — **Willan** expressed originally (1) *pure volition*, and this is its most frequent use in O.E. It may occur without the infinitive : **Nylle ic ðæs synfullan dēað, ac ic wille ðæt hē gecyrre and lybbe**, *I do not desire the sinner's death, but I desire that he return and live*. The wish being father to the intention, **willan** soon came to express (2) *purpose* : **Hē sǣde ðæt hē at sumum cirre wolde fandan hū longe ðæt land norðryhte lǣge**, *He said that he intended, at some time, to investigate how far that land extended northward*.

### Verb-Phrases with *habban*, *bēon* (*wesan*), and *weorðan*.

#### *Verb-Phrases in the Active Voice.*

**138.** The present and preterit of **habban**, combined with a past participle, are used in O.E., as in Mn.E., to form the present perfect and past perfect tenses :

#### PRESENT PERFECT.

- Sing.* 1. Ic hæbbe gedrifen  
 2. ðū hæfst gedrifen  
 3. hē hæfð gedrifen

#### PAST PERFECT.

- Sing.* 1. Ic hæfde gedrifen  
 2. ðū hæfdest gedrifen  
 3. hē hæfde gedrifen

| PRESENT PERFECT. |                   | PAST PERFECT. |                   |
|------------------|-------------------|---------------|-------------------|
| Plur. 1. wē      | } habbað gedrifen | Plur. 1. wē   | } hæfdon gedrifen |
| 2. gē            |                   | 2. gē         |                   |
| 3. hie           |                   | 3. hie        |                   |

The past participle is not usually inflected to agree with the direct object: **Norðymbre** **qnd** **Ēastęngle** **hæfdon** **Ælfrede** **cyninge** **āðas** **geseald** (not *gesealde*, § 82), *The Northumbrians and East Anglians had given king Alfred oaths*; **qnd** **hæfdon** **miclne** **dæl** **ðāra** **horsa** **freten** (not *fretenne*), and (they) *had devoured a large part of the horses*.

NOTE. — Many sentences might be quoted in which the participle does agree with the direct object, but there seems to be no clear line of demarcation between them and the sentences just cited. Originally, the participle expressed a *resultant state*, and belonged in sense more to the object than to **habban**; but in Early West Saxon **habban** had already, in the majority of cases, become a pure auxiliary when used with the past participle. This is conclusively proved by the use of **habban** with intransitive verbs. In such a clause, therefore, as **oð** **ðæt** **hie** **hine** **ofslęgenne** **hæfdon**, there is no occasion to translate *until they had him slain* (= *resultant state*); the agreement here is more probably due to the proximity of **ofslęgenne** to **hine**. So also **ac** **hī** **hæfdon** **pā** **hiera** **stemn** **gesętenne**, *but they had already served out* (*sat out*) *their military term*.

139. If the verb is intransitive, and denotes a *change of condition, a departure or arrival*, **bēon** (**wesan**) usually replaces **habban**. The past participle, in such cases, partakes of the nature of an adjective, and generally agrees with the subject: **Mīne** **welan** **þe** **ic** **īo** **hæfde** **syndon** **ealle** **gewitene** **qnd** **gedrorene**, *My possessions which I once had are all departed and fallen away*; **wæron** **pā** **męn** **uppe** **on** **lōnde** **of** **āgāne**, *the men had gone up ashore*; **qnd** **pā** **ōpre** **wæron** **hungre** **ācwolen**, and the

*others had perished of hunger; qnd ēac sē micla hēre wæs þā þær tō cumen, and also the large army had then arrived there.*

**140.** A progressive present and preterit (not always, however, with distinctively progressive meanings) are formed by combining a present participle with the present and preterit of *bēon* (*wesan*). The participle remains uninflected: *qnd hīe alle on ðone cyning wærun feohtende, and they all were fighting against the king; Symle hē bið lōciende, nē slæpð hē nāfre, He is always looking, nor does He ever sleep.*

NOTE. — In most sentences of this sort, the subject is masculine (singular or plural); hence no inference can be made as to agreement, since *-e* is the participial ending for both numbers of the nominative masculine (§ 82). By analogy, therefore, the other genders usually conform in inflection to the masculine: *wæron þā ealle þā dēoflu clypigende ānre stefne, then were all the devils crying with one voice.*

#### *Verb-Phrases in the Passive Voice.*

**141.** Passive constructions are formed by combining *bēon* (*wesan*) or *weorðan* with a past participle. The participle agrees regularly with the subject: *hīe wæron benumene ægðer ge þæs cēapes ge þæs cornes, they were deprived both of the cattle and the corn; hī bēoð āblende mid ðām pīostrum heora scylda, they are blinded with the darkness of their sins; and sē wæhrēowa Domiciānus on ðām ylcan gēare wearð ācweald, and the murderous Domitian was killed in the same year; qnd Æpelwulf aldormon wearð ofslægen, and Æthelwulf, alderman, was slain.*

NOTE 1. — To express agency, Mn.E. employs *by*, rarely *of*; M.E. *of*, rarely *by*; O.E. *frōm* (*fram*), rarely *of*: *Sē ðe Godes bebodu*

ne gecnæwð, ne bið hē oncnāwen from Gode, *He who does not recognize God's commands, will not be recognized by God*; **Betwux þām wearð ofslagen Ēadwine . . . fram Brytta cyninge**, *Meanwhile, Edwin was slain by the king of the Britons*.

NOTE 2. — O.E. had no progressive forms for the passive, and could not, therefore, distinguish between *He is being wounded* and *He is wounded*. It was not until more than a hundred years after Shakespeare's death that *being* assumed this function. **Weorðan**, which originally denoted *a passage from one state to another*, was ultimately driven out by **bēon** (**wesan**), and survives now only in *Woe worth* (= *be to*).

### SELECTIONS FOR READING.

---

#### PROSE.

##### INTRODUCTORY.

##### I. The Anglo-Saxon Chronicle.

THIS famous work, a series of progressive annals by unknown hands, embraces a period extending from Cæsar's invasion of England to 1154. It is not known when or where these annals began to be recorded in English.

“The annals from the year 866 — that of Ethelred's ascent of the throne — to the year 887 seem to be the work of one mind. Not a single year is passed over, and to several is granted considerable space, especially to the years 871, 878, and 885. The whole has gained a certain roundness and fulness, because the events — nearly all of them episodes in the ever-recurring conflict with the Danes — are taken in their connection, and the thread dropped in one year is resumed in the next. Not only is the style in itself concise; it has a sort of nervous severity and pithy rigor. The construction is often antiquated, and suggests at times the freedom of poetry; though this purely historical prose is far removed from poetry in profusion of language.” (Ten Brink, *Early Eng. Lit.*, I.)

##### II. The Translations of Alfred.

Alfred's reign (871–901) may be divided into four periods. The *first*, the period of Danish invasion, extends from 871 to

881; the *second*, the period of comparative quiet, from 881 to 893; the *third*, the period of renewed strife (beginning with the incursions of Hasting), from 893 to 897; the *fourth*, the period of peace, from 897 to 901. His literary work probably falls in the second period.\*

The works translated by Alfred from Latin into the vernacular were (1) *Consolation of Philosophy* (*De Consolatione Philosophiae*) by Boëthius (475–525), (2) *Compendious History of the World* (*Historiarum Libri VII*) by Orosius (c. 418), (3) *Ecclesiastical History of the English* (*Historia Ecclesiastica Gentis Anglorum*) by Bede (672–735), and (4) *Pastoral Care* (*De Cura Pastoralis*) by Pope Gregory the Great (540–604).

The chronological sequence of these works is wholly unknown. That given is supported by Turner, Arend, Morley, Grein, and Pauli. Wülker argues for an exact reversal of this order. According to Ten Brink, the order was more probably (1) *Orosius*, (2) *Bede*, (3) *Boëthius*, and (4) *Pastoral Care*. The most recent contribution to the subject is from Wülfing, who contends for (1) *Bede*, (2) *Orosius*, (3) *Pastoral Care*, and (4) *Boëthius*.

## I. THE BATTLE OF ASHDOWN.

[From the *Chronicle*, Parker MS. The event and date are significant. The Danes had for the first time invaded Wessex. Alfred's older brother, Ethelred, was king; but to Alfred belongs the glory of the victory at Ashdown (Berkshire). Asser (*Life of Alfred*) tells us that for a long time Ethelred remained praying in his tent, while Alfred and his followers went forth "like a wild boar against the hounds."]

## II. A PRAYER OF KING ALFRED.

[With this characteristic prayer, Alfred concludes his translation of Boëthius's *Consolation of Philosophy*. Unfortunately, the only extant MS. (Bodleian 180) is Late West Saxon. I follow, therefore, Prof. A. S. Cook's normalization on an Early West Saxon basis. See Cook's *First Book in Old English*, p. 163.]

### III. THE VOYAGES OF OHTHERE AND WULFSTAN.

[Lauderdale and Cottonian MSS. These voyages are an original insertion by Alfred into his translation of Orosius's *Compendious History of the World*.

"They consist," says Ten Brink, "of a complete description of all the countries in which the Teutonic tongue prevailed at Alfred's time, and a full narrative of the travels of two voyagers, which the king wrote down from their own lips. One of these, a Norwegian named Ohtere, had quite

circumnavigated the coast of Scandinavia in his travels, and had even penetrated to the White Sea; the other, named Wulfstan, had sailed from Schleswig to Frische Haff. The geographical and ethnographical details of both accounts are exceedingly interesting, and their style is attractive, clear, and concrete."

Ohthere made two voyages. Sailing first northward along the western coast of Norway, he rounded the North Cape, passed into the White Sea, and entered the Dwina River (*ān micel ēa*). On his second voyage he sailed southward along the western coast of Norway, entered the Skager Rack (*wīdsæ*), passed through the Cattegat, and anchored at the Danish port of Haddeby (*æt Hæþum*), modern Schleswig.

Wulfstan sailed only in the Baltic Sea. His voyage of seven days from Schleswig brought him to Drausen (*Trūsō*) on the shore of the Drausensea.]

11-12. **scypa . . . leohte.** These words exhibit inflections more frequent in Late than in Early West Saxon. The normal forms would be **scypu, leoht**; but in Late West Saxon the **-u** of short-stemmed neuters is generally replaced by **-a**; and the nominative accusative plural neuter of adjectives takes, by analogy, the masculine endings: **hwate, gōde, hǣlge**, instead of **hwatu, gōd, hǣlgu**.

Cp. the German 'Gasthaus zur Krone,' Stamboul = *es tån pólin.*" (Sweet.) See, also, *Atterbury*, § 28, Note 3.

14-15. **wæs . . . þā īgland.** The singular predicate is due again to inversion (p. 100, note on *gefeah*). The construction is comparatively rare in O.E., but frequent in Shakespeare and in the popular speech of to-day. Cf. *There is, Here is, There has been*, etc., with a (single) plural subject following.

The man who has the horse coming second takes part 2 or *b*, and so, in succession, till the least part, 6 or *a*, is taken.”

5-6. **man . . . hī**. Here the plural **hī** refers to the singular **man**. Cf. p. 109, ll. 18-19, **ælc . . . mōtan**. In *Exodus xxxii*, 24, we find "*Whosoever* hath any gold, let *them* break it off"; and Addison writes, "I do not mean that I think *anyone* to blame for taking due care of *their* health." The construction, though outlawed now, has been common in all periods of our language. Paul remarks (*Prinzipien der Sprachgeschichte*, 3d ed., § 186) that "When a word is used as an indefinite [one, man, somebody, etc.] it is, strictly speaking, incapable of any distinction of number. Since, however, in respect of the external form, a particular number has to be chosen, it is a matter of indifference which this is. . . . Hence a change of numbers is common in the different languages." Paul fails to observe that the change is always from singular to plural, not from plural to singular. See *Note on the Concord of Collectives and Indefinites* (*Anglia XI*, 1901). See p. 119, note on ll. 19-21.

## IV. THE STORY OF CÆDMON.

[From the so-called Alfredian version of Bede's *Ecclesiastical History*. The text generally followed is that of MS. Bodley, Tanner 10. Miller (*Early English Text Society*, No. 95, *Introd.*) argues, chiefly from the use of the prepositions, that the original O.E. MS. was Mercian, composed possibly in Lichfield (Staffordshire). At any rate, O.E. idiom is frequently sacrificed to the Latin original.

"Cædmon, as he is called, is the first Englishman whose name we know who wrote poetry in our island of England; and the first to embody in verse the new passions and ideas which Christianity had brought into England. . . . Undisturbed by any previous making of lighter poetry, he came fresh to the work of Christianising English song. It was a great step to make. He built the chariot in which all the new religious emotions of England could now drive along." (Brooke, *The History of Early English Literature*, cap. XV.) There is no reason to doubt the historical existence of Cædmon; for Bede, who relates the story, lived near Whitby, and was seven years old when Cædmon died (A.D. 680)].

1. **ðysse abbudissan.** The abbess referred to is the famous Hild, or Hilda, then living in the monastery at Streones-halh, which, according to Bede, means "Bay of the Beacon." The Danes afterward gave it the name Whitby, or "White Town." The surroundings were eminently fitted to nurture England's first poet. "The natural scenery which surrounded him, the valley of the Esk, on whose sides he probably lived, the great cliffs, the billowy sea, the vast sky seen from the heights over the ocean, played incessantly upon him." (Brooke.)

Note, also, in this connection, the numerous Latin words that the introduction of Christianity (A.D. 597) brought into the vocabulary of O.E.: **abbudisse, mynster, bisceop, Læden, prēost, æstel, mancus.**

4-5. The more usual order of words would be **ac nænig, hwæðre, ne meahte ðæt dōn gelice him.**

10-11. **qnd his . . . singan**, and which it became his (the) pious tongue to sing.

14-15. **blisse intinga**, for the sake of joy; but the translator has confused *laetitiae causā* (ablative) and *laetitiae causa* (nominative). The proper form would be **for blisse** with omission of **intingan**, just as for my sake is usually **for mē**; for his (or their) sake, **for him**. Cf. Mark vi, 26: "Yet for his oath's sake, and for their sakes which sat with him, he would not reject her," **for ðæm āðe, qnd for ðæm þe him mid sæton**. For his sake is frequently **for his ðingon** (**ðingum**), rarely **for his intingan**. **Þingon** is regularly used when the preceding genitive is a noun denoting a person: for my wife's sake, **for mīnes wīfes ðingon** (*Genesis xx, 11*), etc.

18-19. **pæt . . . pæt hē forlēt**. The substantival clause introduced by the second **pæt** amplifies by apposition the first **pæt**: *When he then, at a certain time* (instrumental case, § 98, (2)), *did*

that, namely, when he left the house. The better Mn.E. would be *this . . . that*: “Added yet *this* above all, *that* he shut up John in prison” (*Luke iv, 20*).

1-2. **þāra . . . beboden.** This does not mean that Cædmon was a herdsman, but that he served in turn as did the other secular attendants at the monastery.

13-14. **þāra endebyrdnes þis is.** Bede writes *Hic est sensus, non autem ordo ipse verborum*, and gives in Latin prose a translation of the hymn from the Northumbrian dialect, in which Cædmon wrote. The O.E. version given above is, of course, not the Northumbrian original (which, however, with some variations is preserved in several of the Latin MSS. of Bede's *History*), but a West Saxon version made also from the Northumbrian, not from the Latin.

15. **Nū ſculon hērigean,** *Now ought we to praise.* The subject **wē** is omitted in the best MSS. Note the characteristic use of synonyms, or epithets, in this bit of O.E. poetry. Observe that it is not the *thought* that is repeated, but rather the *idea*, the *concept*, God. See p. 124.

7-9. qnd þām wordum . . . tōgepēodde, and to those words he soon joined, in the same meter, many (other) words of song worthy of God. But the translator has not only blundered over Bede's Latin (*eis mox plura in eundem modum verba Deo digna carminis adjunxit*), but sacrificed still more the idiom of O.E. The predicate should not come at the end; **in** should be followed by the dative; and for **Gode wyrðes sōnges** the better O.E. would be **sōnges Godes wyrðes**. When used with the dative **wyrð** (**weorð**) usually means *dear* (= of worth) to.

16. þā . . . gesewen. We should expect **frōm him eallum**; but the translator has again closely followed the Latin (*visumque est omnibus*), as later (in the *Conversion of Edwin*) he renders *Talis mihi videtur* by **pyslīc mē is gesewen**, *Talis* (**pyslīc**) agreeing with a following *vita* (**lif**). Ælfric, however, with no Latin before him, writes that John **wearð ðā him** [= **frōm Drihtene**] **inwardlice gelufod**. It would seem that in proportion as a past participle has the force of an adjective, the *to* relation may supplant the *by* relation; just as we say *unknown to* instead of *unknown by*, *unknown* being more adjectival than participial. **Gesewen**, therefore, may here be

translated *visible, evident, patent* (= *gesynelīc, sweotol*); and *gelufod, dear* (= *weorð, lēof*).

A survival of adjectival *gesewen* is found in Wycliffe's *New Testament* (1 Cor. xv, 5-8): "He was *seyn* to Cephas, and aftir these thingis to enleuene; aftirward he was *seyn* to mo than fyue hundrid britheren togidere . . . aftirward he was *seyn* to James, and aftirward to alle the apostlis. And last of alle he was *seyn* to me, as to a deed borun child." The construction is frequent in Chaucer.

9-10. **qnd hēo hine þā mōnade . . . munuchād onfēnge.** Hild's advice has in it the suggestion of a personal experience, for she herself had lived half of her life (thirty-three years) "before," says Bede, "she dedicated the remaining half to our Lord in a monastic life."

## V. ALFRED'S PREFACE TO THE PASTORAL CARE.

[Based on the Hatton MS. Of the year 597, the *Chronicle* says: "In this year, Gregory the Pope sent into Britain Augustine with very many monks, who gosselled [preached] God's word to the English folk." Gregory I, surnamed "The Great," has ever since been considered the apostle of English Christianity, and his *Pastoral Care*, which contains instruction in conduct and doctrine for all bishops, was a work that Alfred could not afford to leave untranslated. For this translation Alfred wrote a *Preface*, the historical value of which it would be hard to overrate. In it he describes vividly the intellectual ruin that the Danes had wrought, and develops at the same time his plan for repairing that ruin.

6. hē mōnig lēoð geworhte. The opinion is now gaining ground that of these "many poems" only the short hymn, already given, has come down to us. Of other poems claimed for Cædmon, the strongest arguments are advanced in favor of a part of the fragmentary poetical paraphrase of *Genesis*.

This *Preface* and the *Battle of Ashdown* (p. 99) show the great king in his twofold character of warrior and statesman, and justify the inscription on the base of the statue erected to him in 1877, at Wantage (Berkshire), his birth-place: "Ælfred found Learning dead, and he restored it; Education neglected, and he revived it; the laws powerless, and he gave them force; the Church debased, and he raised it; the Land ravaged by a fearful Enemy, from which he delivered it. Ælfred's name will live as long as mankind shall respect the Past."]

14. Alfred is here addressing the bishops collectively, and hence uses the plural *īow* (= *ēow*), not *þē*.

16. *ðæt wē ðā*. These three words are not necessary to the sense. They constitute the figure known as epanalepsis, in which "the same word or phrase is repeated after one or more intervening words." *þā* is the pronominal substitute for *suma bēc*.

17. *Gedōn* is the first person plural subjunctive (from infinitive *gedōn*). It and *wenden* are in the same construction. Two things seem "better" to Alfred: (1) *that we translate*, etc., (2) *that we cause*, etc.

19-21. *sīo gioguð . . . is . . . hīe . . . sīen*. Notice how the collective noun, *gioguð*, singular at first both in form and function, gradually loses its oneness before the close of the sentence is reached, and becomes plural. The construction is entirely legitimate

in Mn.E. Spanish is the only modern language known to me that condemns such an idiom: "Spanish ideas of congruity do not permit a collective noun, though denoting a plurality, to be accompanied by a plural verb or adjective in the same clause" (Ramsey, *Text-Book of Modern Spanish*, § 1452).

# POETRY.

## INTRODUCTORY.

### I. HISTORY.

#### (a) Old English Poetry as a Whole.

NORTHUMBRIA was the home of Old English poetry. Beginning with Cædmon and his school A.D. 670, Northumbria maintained her poetical supremacy till A.D. 800, seven years before which date the ravages of the Danes had begun. When Alfred ascended the throne of Wessex (871), the Danes had destroyed the seats of learning throughout the whole of Northumbria. As Whitby had been "the cradle of English poetry," Winchester (Alfred's capital) became now the cradle of English prose; and the older poems that had survived the fire and sword of the Vikings were translated from the original Northumbrian dialect into the West Saxon dialect. It is, therefore, in the West Saxon dialect that these poems<sup>1</sup> have come down to us.

Old English poetry contains in all only about thirty thousand lines; but it includes epic, lyric, didactic,

---

<sup>1</sup> This does not, of course, include the few short poems in the *Chronicle*, or that portion of *Genesis* (*Genesis B*) supposed to have been put directly into West Saxon from an Old Saxon original. There still remain in Northumbrian the version of *Cædmon's Hymn*, fragments of the *Ruthwell Cross*, *Bede's Death-Song*, and the *Leiden Riddle*.

elegiac, and allegorical poems, together with war-ballads, paraphrases, riddles, and charms. Of the five elegiac poems (*Wanderer*, *Seafarer*, *Ruin*, *Wife's Complaint*, and *Husband's Message*), the *Wanderer* is the most artistic, and best portrays the gloomy contrast between past happiness and present grief so characteristic of the Old English lyric.

Old English literature has no love poems. The central themes of its poets are battle and bereavement, with a certain grim resignation on the part of the hero to the issues of either. The movement of the thought is usually abrupt, there being a noticeable poverty of transitional particles, or connectives, "which," says Ten Brink, "are the cement of sentence-structure."

(b) *Beowulf*.

The greatest of all Old English poems is the epic, *Beowulf*.<sup>1</sup> It consists of more than three thousand lines, and probably assumed approximately its present form in Northumbria about A.D. 700. It is a crystallization of continental myths; and, though nothing is said of England, the story is an invaluable index to the social, political, and ethical ideals of our Germanic ancestors before and after they settled along the English coast. It is most poetical, and its testimony is historically most valuable, in the character-portraits that it contains. The fatalism that runs through it,

---

<sup>1</sup> The word *bēowulf*, says Grimm, meant originally *bee-wolf*, or *bee-enemy*, one of the names of the woodpecker. Sweet thinks the bear was meant. But the word is almost certainly a compound of *Bēow* (cf. O.E. *bēow* = grain), a Danish demigod, and *wulf* used as a mere suffix.

instead of making the characters weak and less human, serves at times rather to dignify and elevate them. "Fate," says *Beowulf* (l. 572), recounting his battle with the sea-monsters, "often saves an undoomed man *if his courage hold out.*"

"The ethical essence of this poetry," says Ten Brink, "lies principally in the conception of manly virtue, undismayed courage, the stoical encounter with death, silent submission to fate, in the readiness to help others, in the clemency and liberality of the prince toward his thanes, and the self-sacrificing loyalty with which they reward him."

NOTE 1. — Many different interpretations have been put upon the story of *Beowulf* (for argument of story, see texts). Thus Müllenhoff sees in Grendel the giant-god of the storm-tossed equinoctial sea, while *Beowulf* is the Scandinavian god Freyr, who in the spring drives back the sea and restores the land. Laistner finds the prototype of Grendel in the noxious exhalations that rise from the Frisian coast-marshes during the summer months; *Beowulf* is the wind-hero, the autumnal storm-god, who dissipates the effluvia.

## II. STRUCTURE.

### (a) Style.

In the structure of Old English poetry the most characteristic feature is the constant repetition of the idea (sometimes of the thought) with a corresponding variation of phrase, or epithet. When, for example, the Queen passes into the banquet hall in *Beowulf*, she is designated at first by her name, **Wealhþēow**; she is then described in turn as **cwēn Hrōðgāres** (*Hrothgar's queen*), **gold-hroden** (*the gold-adorned*), **frēolic wif**

(the noble woman), *ides Helminga* (the Helmings' lady), *bēag-hroden cwēn* (the ring-adorned queen), *mōde gepungen* (the high-spirited), and *gold-hroden frēolīcu folc-cwēn* (the gold-adorned, noble folk-queen).

And whenever the sea enters largely into the poet's verse, not content with simple (uncompounded) words (such as *sǣ*, *lagu*, *holm*, *strēam*, *mære*, etc.), he will use numerous other equivalents (phrases or compounds), such as *wapema gebind* (the commingling of waves), *lagu-flōd* (the sea-flood), *lagu-stræt* (the sea-street), *swan-rād* (the swan-road), etc. These compounds are usually nouns, or adjectives and participles used in a sense more appositive than attributive.

It is evident, therefore, that this abundant use of compounds, or periphrastic synonyms, grows out of the desire to repeat the idea in varying language. It is to be observed, also, that the Old English poets rarely make any studied attempt to balance phrase against phrase or clause against clause. Theirs is a repetition of idea, rather than a parallelism of structure.

NOTE 1. — It is impossible to tell how many of these synonymous expressions had already become stereotyped, and were used, like many of the epithets in the *Iliad* and *Odyssey*, purely as padding. When, for example, the poet tells us that at the most critical moment Beowulf's sword failed him, adding in the same breath, *iren ær-gōd* (matchless blade), we conclude that the bard is either nodding or parroting.

### (b) Meter.

[Re-read § 10, (3).]

#### *Primary Stress.*

Old English poetry is composed of certain rhythmically ordered combinations of accented and unaccented

syllables. The accented syllable (the arsis) is usually long, and will be indicated by the macron with the acute accent over it ( $\acute{\text{—}}$ ); when short, by the breve with the same accent ( $\acute{\text{˘}}$ ). The unaccented syllable or syllables (the thesis) may be long or short, and will be indicated by the oblique cross ( $\times$ ).

*Secondary Stress.*

A secondary accent, or stress, is usually put upon the second member of compound and derivative nouns, adjectives, and adverbs. This will be indicated by the macron with the grave accent, if the secondary stress falls on a long syllable ( $\grave{\text{—}}$ ); by the breve with the same accent, if the secondary stress falls on a short syllable ( $\grave{\text{˘}}$ ). Nouns :

**Hrōðgāres** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **fēondgrāpum** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **frēomægum** ( $\acute{\text{—}} \grave{\text{—}} \times$ ),  
**Ēast-Dena** ( $\acute{\text{—}} \grave{\text{˘}} \times$ ), **Helminga** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **Scyldinga** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **ānhaga**  
 ( $\acute{\text{—}} \grave{\text{˘}} \times$ ), **Ecgpēowes** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **sinc-fato** ( $\acute{\text{—}} \grave{\text{˘}} \times$ ).

Adjectives :<sup>1</sup>

**æghwylone** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **prīsthȳdig** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **gold-hroden** ( $\acute{\text{—}} \grave{\text{˘}} \times$ ),  
**drēorigne** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **gyldenne** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **ōðerne** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **gæstlicum**  
 ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **wynsume** ( $\acute{\text{—}} \grave{\text{˘}} \times$ ), **ænigne** ( $\acute{\text{—}} \grave{\text{—}} \times$ ).

Adverbs :<sup>2</sup>

**unsōfte** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **heardlice** ( $\acute{\text{—}} \grave{\text{—}} \times$ ), **semninga** ( $\acute{\text{—}} \grave{\text{—}} \times$ ).

<sup>1</sup> It will be seen that the adjectives are chiefly derivatives in **-ig**, **-en**, **-er**, **-lic**, and **-sum**.

<sup>2</sup> Most of the adverbs belonging here end in **-lice**, **-unga**, and **-inga**, § 93, (1), (2) : such words as **æt-gædere**, **on-gēan**, **on-wég**, **tō-gēanes**, **tō-míddes**, etc., are invariably accented as here indicated.

The Old English poets place also a secondary accent upon the ending of present participles (-ende), and upon the penultimate of weak verbs of the second class (§ 130), provided the root-syllable is long.<sup>1</sup> Present participles :

slæpendne (ˌ ˌ x), wīs-hycgende (ˌ ˌ ˌ x), flēotendra (ˌ ˌ x), hrēosende (ˌ ˌ x).

Weak verbs :

swynsode (ˌ ˌ x), pancode (ˌ ˌ x), wānigean (ˌ ˌ x), scēawian (ˌ ˌ x), scēawige (ˌ ˌ x), hlífian (ˌ ˌ x).

#### *Resolved Stress.*

A short accented syllable followed in the same word by an unaccented syllable (usually short also) is equivalent to one long accented syllable (ˌ x = ˌ). This is known as a resolved stress, and will be indicated thus, ˌx̄ :

hæleð̄a (ˌx̄ x), guman (ˌx̄), Gode (ˌx̄), s̄ēle-ful (ˌx̄ x), ides (ˌx̄), fyrena (ˌx̄ x), mað̄elode (ˌx̄ ˌ x), hogode (ˌx̄ x), mægen-ellen (ˌx̄ ˌ x), hige-þ̄ihtigne (ˌx̄ ˌ ˌ x), Metudes (ˌx̄ x), lagulāde (ˌx̄ ˌ x), unlyfigendes (ˌ ˌx̄ ˌ x), biforan (x ˌx̄), forþolian (x ˌx̄ x), bað̄ian (ˌx̄ x), worolde (ˌx̄ x).

Resolution of stress may also attend secondary stresses :

sinc-fato (ˌ ˌx̄), dryht-s̄ēle (ˌ ˌx̄), ferð̄loca (ˌ ˌx̄), forð̄wege (ˌ ˌx̄).

---

<sup>1</sup> It will save the student some trouble to remember that this means long by nature (**licodon**), or long by position (**swynsode**), or long by resolution of stress (**mað̄elode**), — see next paragraph.

*The Normal Line.*

Every normal line of Old English poetry has four primary accents, two in the first half-line and two in the second half-line. These half-lines are separated by the cesura and united by alliteration, the alliterative letter being found in the first stressed syllable of the second half-line. This syllable, therefore, gives the cue to the scansion of the whole line. It is also the only alliterating syllable in the second half-line. The first half-line, however, usually has two alliterating syllables, but frequently only one (the ratio being about three to two in the following selections). When the first half-line contains but one alliterating syllable, that syllable marks the first stress, rarely the second. The following lines are given in the order of their frequency:

- (1) *p̄ær wæs hæleða hléahtor; hlýn swýnsode.*
- (2) *móde gepúngen, médo-ful ætbær.*
- (3) *sōna þæt onfúnde fýrena hýrde.*

Any initial vowel or diphthong may alliterate with any other initial vowel or diphthong; but a consonant requires the same consonant, except *st*, *sp*, and *sc*, each of which alliterates only with itself.

Remembering, now, that either half-line (especially the second) may begin with several unaccented syllables (these syllables being known in types A, D, and E as the *anacrusis*), but that neither half-line can end with more than one unaccented syllable, the student may begin at once to read and properly accentuate Old English poetry. It will be found that the alliter-

ative principle does not operate mechanically, but that the poet employs it for the purpose of emphasizing the words that are really most important. Sound is made subservient to sense.

When, from the lack of alliteration, the student is in doubt as to what word to stress, let him first get the exact meaning of the line, and then put the emphasis on the word or words that seem to bear the chief burden of the poet's thought.

NOTE 1. — A few lines, rare or abnormal in their alliteration or lack of alliteration, may here be noted. In the texts to be read, there is one line with no alliteration: *Wanderer* 58; three of the type  $a\cdots b | a\cdots b$ : *Beowulf* 654, 830, 2746; one of the type  $a\cdots a | b\cdots a$ : *Beowulf* 2744; one of the type  $a\cdots a | b\cdots c$ : *Beowulf* 2718; and one of the type  $a\cdots b | c\cdots a$ : *Beowulf* 2738.

### *The Five Types.*

By an exhaustive comparative study of the metrical unit in Old English verse, the half-line, Professor Eduard Sievers,<sup>1</sup> of the University of Leipzig, has shown that there are only five types, or varieties,

---

<sup>1</sup> Sievers' two articles appeared in the *Beiträge zur Geschichte der deutschen Sprache und Literatur*, Vols. X (1885) and XII (1887). A brief summary, with slight modifications, is found in the same author's *Altgermanische Metrik*, pp. 120-144 (1893).

Before attempting to employ Sievers' types, the student would do well to read several pages of Old English poetry, taking care to accentuate according to the principles already laid down. In this way his ear will become accustomed to the rhythm of the line, and he will see more clearly that Sievers' work was one primarily of systematization. Sievers himself says: "I had read Old English poetry for years exactly as I now scan it, and long before I had the slightest idea that what I did instinctively could be formulated into a system of set rules." (*Altgermanische Metrik, Vorwort*; p. 10.)

employed. These he classifies as follows, the perpendicular line serving to separate the so-called feet, or measures :

|      |           |   |      |                          |
|------|-----------|---|------|--------------------------|
| 1. A | ∠ x   ∠ x | } | 4. D | { D <sup>1</sup> ∠   ∠ x |
| 2. B | x ∠   x ∠ |   |      | { D <sup>2</sup> ∠   ∠ x |
| 3. C | x ∠   ∠ x |   | 5. E | { E <sup>1</sup> ∠ x   ∠ |
|      |           |   |      | { E <sup>2</sup> ∠ x   ∠ |

It will be seen (1) that each half-line contains two, and only two, feet; (2) that each foot contains one, and only one, primary stress; (3) that A is trochaic, B iambic; (4) that C is iambic-trochaic; (5) that D and E consist of the same feet but in inverse order.

#### *The Five Types Illustrated.*

[All the illustrations, as hitherto, are taken from the texts to be read. The figures prefixed indicate whether first or second half-line is cited. B = *Beowulf*; W = *Wanderer*.]

#### 1. TYPE A, ∠ x | ∠ x

Two or more unaccented syllables (instead of one) may intervene between the two stresses, but only one may follow the last stress. If the thesis in either foot is the second part of a compound it receives, of course, a secondary stress.

| (2) <i>goldwine mīnne</i> , W. 22,                    | ∠ úx   ∠ x    |
| (1) <i>eġesan þēon</i> [ $>$ *þīhan: § 118], B. 2737, | úx x   ∠ x    |

NOTE. — Rare forms of A are  $\angle \angle x | \angle x$  (does not occur in texts),  $\angle \angle x | \angle \angle$  (occurs once, B. 781 (1)), and  $\angle x \angle | \angle x$  (once, B. 2743 (1)).

## 2. TYPE B, $x \angle | x \angle$

Two, but not more than two, unaccented syllables may intervene between the stresses. The type of B most frequently occurring is  $x x \angle | x \angle$

- |  |                   |

| (1) <i>forþon ne mæg weorþan wīs</i> , W. 64,              | x x x x ∠   x ∠   |
| (1) <i>Næfre ic ænegum</i> [= æn'gum] <i>mēn</i> , B. 656, | x x x ∠   x ∠     |

NOTE. — In the last half-line Sievers substitutes the older form *ængum*, and supposes elision of the *e* in *Næfre* (= *Næfr-ic*:  $x x \angle | x \angle$ ).

## 3. TYPE C, $x \angle | \angle x$

The conditions of this type are usually satisfied by compound and derivative words, and the second stress (not so strong as the first) is frequently on a short syllable. The two arses rarely alliterate. As in B, two unaccented syllables in the first thesis are more common than one.

| (2) <i>nō þær fela bringeð</i> , W. 54,      | x x ∫x   ∠ x   |

$$4. \text{ TYPE D, } \begin{cases} D^1 \angle | \angle \grave{x} \\ D^2 \angle | \angle x \grave{x} \end{cases}$$

Both types of D may take one unaccented syllable between the two primary stresses ( $\angle x | \angle \grave{x}$ ,  $\angle x | \angle x \grave{x}$ ). The secondary stress in  $D^1$  falls usually on the second syllable of a compound or derivative word, and this syllable (as in C) is frequently short.

(a)  $D^1 \angle | \angle \grave{x}$

|   |                  |
|---|------------------|
| (1) <i>cwēn Hrōðgāres</i> , B. 614,                   | ∠   ∠ ∠ x        |
| (2) <i>dǣl æghwylcne</i> , B. 622,                    | ∠   ∠ ∠ x        |
| (1) <i>Bēowulf maðelode</i> , B. 632,                 | ∠ x   ∫x ∫ x     |
| (2) <i>slāt unwearnum</i> , B. 742,                   | ∠   ∠ ∠ x        |
| (1) <i>wrāpra wælsleahta</i> , W. 7,                  | ∠ x   ∠ ∠ x      |
| (1) <i>wōd wintercearig [= wint'rcearig]</i> , W. 24, | ∠   ∠ ∫ x        |
| (1) <i>sōhte seþe drēorig</i> , W. 25,                | ∠ x   ∫x ∠ x     |
| (1) <i>ne sōhte searo-nīðas</i> , B. 2739,            | x   ∠ x   ∫x ∠ x |

NOTE.—There is one instance in the texts (B. 613, (1)) of apparent  $\angle x x | \angle \grave{x}$ : **word wæron wynsume**. (The triple alliteration has no significance. The sense, besides, precludes our stressing **wæron**.) The difficulty is avoided by bringing the line under the A type:  $\angle x x | \angle \grave{x}$ .

(b) D<sup>2</sup> ∠ | ∠ x ∩

- |     |                               |             |

| (2) | swimmað eft on weg, W. 53,    | ∠ x   ∠ x ∩ |

Very rarely is the thesis in the second foot expanded.

- |     |                                |               |

| (1) | hrūsan heolster biwrāh, W. 23, | ∠ x   ∠ x x ∩ |

5. TYPE E,  $\begin{cases} E^1 \angle \cap x | \angle \\ E^2 \angle x \cap | \angle \end{cases}$

The secondary stress in E<sup>1</sup> falls frequently on a short syllable, as in D<sup>1</sup>.

(a) E<sup>1</sup> ∠ ∩ x | ∠

- |     |                            |            |

| (2) | wyn eal gedrēas, W. 36,    | ∠ ∩ x   ∠  |
| (2) | feor oft gemon, W. 90,     | ∠ ∩ x   ∠  |

As in D<sup>2</sup>, the thesis in the first foot is very rarely expanded.

- |     |                                |               |
|-----|--------------------------------|---------------|

| (1) | searo-þoncum besmiðod, B. 776, | úx ∩ x x   úx |

NOTE. — Our ignorance of Old English sentence-stress makes it impossible for us to draw a hard-and-fast line in all cases between D<sup>2</sup> and E<sup>1</sup>. For example, in these half-lines (already cited),

wyn eal gedrēas  
feor oft gemon  
Forð nēar ætstōp

if we throw a strong stress on the adverbs that precede their verbs, the type is D<sup>2</sup>. Lessen the stress on the adverbs and increase it on the verbs, and we have E<sup>1</sup>. The position of the adverbs furnishes no clue; for the order of words in Old English was governed not only by considerations of relative emphasis, but by syntactic and euphonic considerations as well.

(b) E<sup>2</sup> ∠ × ∷ | ∠

This is the rarest of all types. It does not occur in the texts, there being but one instance of this type (1. 2437 (2)), and that doubtful, in the whole of *Beowulf*.

#### *Abnormal Lines.*

The lines that fall under none of the five types enumerated are comparatively few. They may be divided into two classes, (1) hypermetrical lines, and (2) defective lines.

#### (1) HYPERMETRICAL LINES.

Each hypermetrical half-line has usually three stresses, thus giving six stresses to the whole line instead of two. These lines occur chiefly in groups, and mark increased range and dignity in the thought. Whether the half-line be first or second, it is usually of the A type without anacrusis. To this type belong the last five lines of the *Wanderer*. Lines 92 and 93 are also unusually long, but not hypermetrical. The

first half-line of 65 is hypermetrical, a fusion of A and C, consisting of ( $\acute{\text{z}} \times \times \times \acute{\text{z}} \mid \acute{\text{z}} \times$ ).

## (2) DEFECTIVE LINES.

The only defective lines in the texts are B. 748 and 2715 (the second half-line in each). As they stand, these half-lines would have to be scanned thus:

|                        |  |
|------------------------|--|
| <b>rǣhte ongēan</b>    | $\acute{\text{z}} \times \mid \times \acute{\text{z}}$           |
| <b>bealo-nīð wēoll</b> | $\acute{\text{z}} \times \acute{\text{z}} \mid \acute{\text{z}}$ |

Sievers emends as follows:

|                         |   |                  |
|-------------------------|---|------------------|
| <b>rǣhte tōgēanes</b>   | $\acute{\text{z}} \times \times \mid \acute{\text{z}} \times$           | = A              |
| <b>bealo-nīðe wēoll</b> | $\acute{\text{z}} \times \acute{\text{z}} \times \mid \acute{\text{z}}$ | = E <sup>1</sup> |

These defective half-lines are made up of syntactic combinations found on almost every page of Old English prose. That they occur so rarely in poetry is strong presumptive evidence, if further evidence were needed, in favor of the adequacy of Sievers' five-fold classification.

NOTE. — All the lines that could possibly occasion any difficulty to the student have been purposely cited as illustrations under the different types. If these are mastered, the student will find it an easy matter to scan the lines that remain.

## SELECTIONS FOR READING.

### VI. EXTRACTS FROM BEOWULF.

#### THE BANQUET IN HEOROT. [Lines 612-662.]

[The Heyne-Socin text has been closely followed. I have attempted no original emendations, but have deviated from the Heyne-Socin edition in a few cases where the Grein-Wülker text seemed to give the better reading.]

The argument preceding the first selection is as follows: Hrothgar, king of the Danes, or Scyldings, elated by prosperity, builds a magnificent hall in which to feast his retainers; but a monster, Grendel by name, issues from his fen-haunts, and night after night carries off thane after thane from the banqueting hall. For twelve years these ravages continue. At last Beowulf, nephew of Hygelac, king of the Geats (a people of South Sweden), sails with fourteen chosen companions to Dane-land, and offers his services to the aged Hrothgar. "Leave me alone in the hall to-night," says Beowulf. Hrothgar accepts Beowulf's proffered aid, and before the dread hour of visitation comes, the time is spent in wassail. The banquet scene follows.]

1. **sinc-fato sealde.** Banning (*Die epischen Formeln im Beowulf*) shows that the usual translation, *gave costly gifts*, must be given up; or, at least, that the *costly gifts* are nothing more than *beakers of mead*. The expression is an epic formula for *passing the cup*.

16-17. **ęnde-dæg . . . mīnne.** This unnatural separation of noun and possessive is frequent in O.E. poetry, but almost unknown in prose.

19-20. **ēode . . . sittan.** The poet might have employed **tō sittanne** (§ 108, (1)); but in poetry the infinitive is often used for the gerund. Alfred himself uses the infinitive or the gerund to express purpose after **gān, gōngan, cuman, and sęndan**.

1 = hēo.

4 = āglācan.

7 = mārþe (acc. sing.).

2 = medu-.

5 = cwōmon.

8 = ealdre (instr. sing.)

3 = gesprečen.

6 = ānigum.

2-6. **wiste . . . cwōman.** A difficult passage, even with Thorpe's inserted *ne*; but there is no need of putting a period after **gepinged**, or of translating **oððe** by *and*: *He (Hrothgar) knew that battle was in store (gepinged) for the monster in the high hall, after [= as soon as] they could no longer see the sun's light, or [= that is] after night came darkening over all, and shadowy figures stalking.* The subject of **cwōman** [= **cwōmon**] is **niht** and **gesceapu**.

The student will note that the infinitive (**scriðan**) is here employed as a present participle after a verb of motion (**cwōman**). This construction with **cuman** is frequent in prose and poetry. The infinitive expresses the kind of motion: **ic cōm drifan** = *I came driving*.

## THE FIGHT BETWEEN BEOWULF AND GRENDEL. [Lines 740-837.]

[The warriors all retire to rest except Beowulf. Grendel stealthily enters the hall. From his eyes gleams "a luster unlovely, likest to fire." The combat begins at once.]

 13 þæt hē ne mētte middan-geardes,  
 14 eorðan scēatta, on elran mēn  
 15 mund-gripe māran; hē on mōde wearð

1. **þæt**, the direct object of **yldan**, refers to the contest about to ensue. Beowulf, in the preceding lines, was wondering how it would result.

7. **ætstōp**. The subject of this verb and of **nam** is Grendel; the subject of the three succeeding verbs (**ræhte**, **onfēng**, **gesæt**) is Beowulf.

12-13. The O.E. poets are fond of securing emphasis or of stimulating interest by indirect methods of statement, by suggesting more than they affirm. This device often appears in their use of negatives (**ne**, l. 13; p. 140, l. 3; **nō**, p. 140, l. 1), and in the unexpected prominence that they give to some minor detail usually suppressed because understood; as where the narrator, wishing to describe the terror produced by Grendel's midnight visits to Heorot, says (ll. 138-139), "Then was it easy to find one who elsewhere, more commodiously, sought rest for himself." It is hard to believe that the poet saw nothing humorous in this point of view.

 15 ceaster-būendum, cēnra gehwylcum,  
 16 eorlum ealu-scerwen. Yrre wæron bēgen [770]

1. nō . . . meahte, none the sooner could he away. The omission of a verb of motion after the auxiliaries **magan**, **mōtan**, **sculan**, and **willan** is very frequent. Cf. Beowulf's last utterance, p. 147, l. 17.

14. The lines that immediately follow constitute a fine bit of description by indication of effects. The two contestants are withdrawn from our sight; but we hear the sound of the fray crashing through the massive old hall, which trembles as in a blast; we see the terror depicted on the faces of the Danes as they listen to the strange sounds that issue from their former banqueting hall; by these sounds we, too, measure the progress and alternations of the combat. At last we hear only the "terror-lay" of Grendel, "lay of the beaten," and know that Beowulf has made good his promise at the banquet (**gilp gelæsted**).

15. **cēnra gehwylcum**. The indefinite pronouns (§ 77) may be used as adjectives, agreeing in case with their nouns; but they frequently, as here, take a partitive genitive: **ānra gehwylcum**, to each one (= to each of ones); **ænige** (instrumental) **þinga**, for any thing (= for any of things); **on healfa gehwone**, into halves (= into each of halves); **ealra dōgra gehwām**, every day (= on each of all days); **ūhtna gehwylce**, every morning (= on each of mornings).

10. Notice that **hit**, the object of **tōbrecean**, stands for **wīn-sele**, which is masculine. See p. 39, Note 2. **Manna** is genitive after **gemete**, not after **ānig**.

17-19. **gryre-lēoð . . . hæfton** [= **hæftan**]. Note that verbs of hearing and seeing, as in Mn.E., may be followed by the infinitive. They heard *God's adversary sing* (**galan**) . . . *hell's captive bewail* (**wānigean**). Had the present participle been used, the effect would have been, as in Mn.E., to emphasize the agent (the subject of the infinitive) rather than the action (the infinitive itself).

1-2. **þær . . . lāfe.** Beowulf's followers now seem to have seized their swords and come to his aid, not knowing that Grendel, having forsworn war-weapons himself, is proof against the best of swords. *Then many an earl of Beowulf's (= an earl of B. very often) brandished his sword.* That no definite earl is meant is shown by the succeeding **hīe meah-ton** instead of **hē meah-te**. See p. 110, Note.

5. *They did not know this (ðæt), while they were fighting;* but the first **Hīe** refers to the warriors who proffered help; the second **hīe**, to the combatants, Beowulf and Grendel. In apposition with **ðæt**, stands the whole clause, **þone synscaðan** (object of **grētan**) . . . **nolde**. The second, or conjunctive, **ðæt** is here omitted before **þone**. See p. 112, note on ll. 18-19.

BEOWULF FATALLY WOUNDED. [Lines 2712-2752.]

[Hrothgar, in his gratitude for the great victory, lavishes gifts upon Beowulf; but Grendel's mother must be reckoned with. Beowulf finds her at the sea-bottom, and after a desperate struggle slays her. Hrothgar again pours treasures into Beowulf's lap. Beowulf, having now accomplished his mission, returns to Sweden. After a reign of fifty years, he goes forth to meet a fire-spewing dragon that is ravaging his kingdom. In the struggle Beowulf is fatally wounded. Wiglaf, a loyal thane, is with him.]

20. grāpe = genitive singular, feminine, after eal.

 14 Bīowulf<sup>3</sup> maðelode;    hē ofer þenne spræc,                    [2725]

5. **se æðeling** is Beowulf.

7. **ęnta geweorc** is a stereotyped phrase for anything that occasions wonder by its size or strangeness.

9. **healde**. Heyne, following Ettmüller, reads **hēoldon**, thus arbitrarily changing mood, tense, and number of the original. Either mood, indicative or subjunctive, would be legitimate. As to the tense, the narrator is identifying himself in time with the hero, whose wonder was "how the stone-arches . . . sustain the ever-during earth-hall": the construction is a form of *oratio recta*, a sort of *miratio recta*. The singular **healde**, instead of **healden**, has many parallels in the dependent clauses of *Beowulf*, most of these being relative clauses introduced by **þāra þe** (= *of those that* . . . + a singular predicate). In the present instance, the predicate has doubtless been influenced by the proximity of **eorð-reçed**, a *quasi*-subject; and we have no more right to alter to **healden** or **hēoldon** than we have to change Shakespeare's *gives* to *give* in

"Words to the heat of deeds too cold breath gives."

(*Macbeth*, II, I, 61.)

11. The **þegn ungemete till** is Wiglaf, the bravest of Beowulf's retainers.

14. **hē ofer þenne spræc**. The editors and translators of *Beowulf* invariably render **ofer** in this passage by *about*; but Beowulf

says not a word about his wound. The context seems to me to show plainly that **ofer** (cf. Latin *supra*) denotes here opposition = *in spite of*. We read in *Genesis*, l. 594, that Eve took the forbidden fruit **ofer Drihtenes word**. Beowulf fears (l. 2331) that he may have ruled unjustly = **ofer ealde riht**; and he goes forth (l. 2409) **ofer willan** to confront the dragon.

4-5. **mīn . . . lif.** See note on **ende-dæg . . . mīnne**, p. 137, ll. 16-17.

8-12. The expression **seçgan þanc** takes the same construction as **þancian**; i.e., the dative of the person (**Frēan**) and the genitive (a genitive of cause) of the thing (**þāra frætwa**). Cf. note on **bidðan**, p. 45. The antecedent of **þe** is **frætwa**. For the position of **on**, see § 94, (5). The clause introduced by **þæs þe** (*because*) is parallel in construction with **frætwa**, both being causal modifiers of **seçge þanc**. The Christian coloring in these lines betrays the influence of priestly transcribers.

13. *Now that I, in exchange for (on) a hoard of treasures, have bartered (bebohte) the laying down (-leçe > licgan) of my old life.* The ethical codes of the early Germanic races make frequent mention of blood-payments, or life-barters. There seems to be here a suggestion of the "wergild."

1. **frēmmað gē**. The plural imperative (as also in **Hātað**) shows that Beowulf is here speaking not so much to Wiglaf in particular as, through Wiglaf, to his retainers in general, — to his *comitatus*.

6. The desire for conspicuous burial places finds frequent expression in early literatures. The tomb of Achilles was situated “high on a jutting headland over wide Hellespont that it might be seen from off the sea.” Elpenor asks Ulysses to bury him in the same way. Æneas places the ashes of Misenus beneath a high mound on a headland of the sea.

7. **hit** = **hlāw**, which is masculine. See p. 39, Note 2.

10–11. **him** . . . **þīoden**. The reference in both cases is to Beowulf, who is disarming himself (*to-of > doff*) for the last time; **þegne** = *to Wiglaf*.

Note, where the personal element is strong, the use of the dative instead of the more colorless possessive; **him of healse**, not **of his healse**.

17. **ic** . . . **sceal**. See note on **nō** . . . **meahte**, p. 140, l. 1.

## VII. THE WANDERER.

[Exeter MS. "The epic character of the ancient lyric appears especially in this: that the song is less the utterance of a momentary feeling than the portrayal of a lasting state, perhaps the reflection of an entire life, generally that of one isolated, or bereft by death or exile of protectors and friends." (Ten Brink, *Early Eng. Lit.*, I.) I adopt Brooke's three-fold division (*Early Eng. Lit.*, p. 356): "It opens with a Christian prologue, and closes with a Christian epilogue, but the whole body of the poem was written, it seems to me, by a person who thought more of the goddess Wyrð than of God, whose life and way of thinking were uninfluenced by any distinctive Christian doctrine."

The author is unknown.]

1. þe . . . him. See § 75 (4). Cf. *Merchant of Venice*, II, 5, 50–51.

18. For mine (MS. in), which does not satisfy metrical requirements, I adopt Kluge's plausible substitution of *miltse*; *miltse witan* = to show (know, feel), pity. The *myne wisse* of *Beowulf* (l. 169) is metrically admissible.

 18 flēotendra ferð<sup>5</sup> nō þær fela bringeð  
 19 cūðra cwidegiedda; cearo<sup>6</sup> bið genīwad [55]

1. The object of **wāt** is **þinceð him on mōde**; but the construction is unusual, inasmuch as both **þæt**'s (**þæt** pronominal before **wāt** and **þæt** conjunctive before **þinceð**) are omitted. See p. 112, ll. 18-19.

5. **þinceð him on mōde** (see note on **him . . . þīoden**, p. 147). "No more sympathetic picture has been drawn by an Anglo-Saxon poet than where the wanderer in exile falls asleep at his oar and dreams again of his dead lord and the old hall and revelry and joy and gifts, — then wakes to look once more upon the waste of ocean, snow and hail falling all around him, and sea-birds dipping in the spray." (Gummere, *Germanic Origins*, p. 221.)

17-19. **Sęcga . . . cwidegiedda** = *But these comrades of warriors [= those seen in vision] again swim away [= fade away]; the ghost of these fleeting ones brings not there many familiar words; i.e. he sees in dream and vision the old familiar faces, but no voice is heard: they bring neither greetings to him nor tidings of themselves.*

10. **Wita sceal geþyldig.** Either **bēon** (**wesan**) is here to be understood after **sceal**, or **sceal** alone means *ought to be*. Neither construction is to be found in Alfredian prose, though the omission of a verb of motion after **sculan** is common in all periods of Old English. See note on **nō . . . meahste**, p. 140.

20. **swā nū.** "The Old English lyrical feeling," says Ten Brink, citing the lines that immediately follow **swā nū**, "is fond of the image of physical destruction"; but I do not think these lines have a merely figurative import. The reference is to a period of real devastation, antedating the Danish incursions. "We might fairly find such a time in that parenthesis of bad government and of national tumult which filled the years between the death of Aldfrith in 705 and the renewed peace of Northumbria under Ceolwulf in the years that followed 729." (Brooke, *Early Eng. Lit.*, p. 355.)

17. **cwōm . . . gesetu.** Ettmüller reads **cwōmon**; but see p. 107, note on **wæs . . . þā igland**. The occurrence of **hwær cwōm** three times in the preceding line tends also to hold **cwōm** in the singular when its plural subject follows. Note the influence of a somewhat similar structural parallelism in *seas hides* of these lines (*Winter's Tale*, IV, 1v, 500–502):

“Not for . . . all the *sun sees* or  
 The close *earth wombs* or the profound *seas hides*  
 In unknown fathoms, will I break my oath.”

### Paragraph-Writing

By Professors F. N. SCOTT, of the University of Michigan, and J. V. DENNEY, of Ohio State University. Revised edition. 12mo, cloth, 480 pages. Price, \$1.25.

FOR this new edition the book has been entirely rewritten and much enlarged. The fundamental idea of the book is, as before, to treat the paragraph as the unit of composition; in adapting the work, however, to the present needs of college and university classes many modifications in general plan and in detail have been made. Among these changes may be mentioned the following:—

The book has been enlarged so as to include the various types of composition—that is, Description, Narration, Exposition, and Argument. These are treated at length and with a thoroughness corresponding to their present importance in college work.

The exercises for individual work have been removed from the text and placed in a division by themselves. This arrangement lends continuity to the text and at the same time gives space for a greatly extended series of progressive exercises offering a wide choice to instructor and student.

The illustrative matter of the preceding edition, through long use somewhat familiar to both teacher and student, has been replaced by fresh and worthy material from a great variety of sources. In amount this material has been more than doubled.

### The College Literature Review

By Professor F. E. BRYANT, of the University of Kansas. Price, each, 10 cents; per dozen, \$1.00.

THIS is a blank book for the use of college classes in literature and composition. On the covers are printed Hints on Reading and on the Preparation of the Review; and also questions suggesting various methods of treatment.

### Questions on Shakespeare: Hamlet

By Professor P. H. PEARSON, of Bethany College, Kansas. 15 cents.

## Public Speaking: A Treatise on Delivery with Selections for Declaiming

By Professor EDWIN D. SHURTER, of the University of Texas. 12mo, cloth, 265 pages. Price, 90 cents.

**T**HIS book treats chiefly of persuasive speaking, and the author lays stress on the fact that mental qualities, such as clearness, simplicity, vivacity, spontaneity, and sincerity, are of chief value in declamation. Although this principle is counted fundamental, the book has all the necessary rules and principles for the technique of public speaking, with exercises for perfecting the voice and for overcoming defects of speech. Gesture is treated in a very happy way, as the physical expression of earnestness.

The chapters are:—

- |   |                                   |
|---|-----------------------------------|
| I. The Nature and Basis of Public Speaking. | VIII. Force, Climax, Volume.      |
| II. The Voice.                              | IX. Tone-Color.                   |
| III. Pronunciation and Enunciation.         | X. Earnestness.                   |
| IV. Key.                                    | XI. Physical Earnestness—Gesture. |
| V. Emphasis.                                | XII. General Suggestions.         |
| VI. Inflection.                             | XIII. Selections for Practice.    |
| VII. Time: Phrasing, Transition.            |                                   |

The Selections for Practice include speeches from Lincoln, Roosevelt, Blaine, Grady, John Hay, Woodrow Wilson, Wendell Phillips, Henry Watterson, and many others.

## A Drill Book in English

Compiled by GEORGE E. GAY, Haverhill, Mass. 12mo, cloth, 108 pages. Price, 45 cents.

**T**HIS manual will appeal only to teachers who believe that there is value in presenting to the pupils specimens of bad English for correction. It contains in brief form rules for spelling, punctuation, capitalization, and the most important principles of grammar and rhetoric. Abundant exercises for practice are given.

**The Drama: Its Law and its Technique**

By ELISABETH WOODBRIDGE, Ph.D. 12mo, cloth, 198 pages. Price, 80 cents.

THE object of this book is to present a manual for use in college courses on the drama, which shall stand the test of actual classroom use. It is successful in avoiding the principal defects of previous short treatises on the subject, which have been made up too completely of theories on the art, or have occupied themselves too exclusively with practical stage-craft.

The chapters are: —

| LAW  | TECHNIQUE                                      |
|--|--|
| I. Poetic Truth.                             | I. The Two Types of Drama.                     |
| II. Dramatic Unity.                          | II. The Logical Divisions of the Action.       |
| III. Seriousness, ΣΠΟΤΔΗ.                    | III. The Mechanical Division of the Drama.     |
| IV. The Nature and Sources of Tragic Effect. | IV-VI. Character-Treatment and Plot in Comedy. |
| V. The Nature and Sources of Comic Effect.   |  |

Its broader foundations are laid in Freytag's Technik des Dramas, but it follows Freytag's footsteps only where it is unavoidable to any one venturing on the ground at all. The discussion itself is an original treatment on lines adapted to give the student a real knowledge and a permanent appreciation of the structure of the drama.

**Selections from Carlyle**

Edited by H. W. BOYNTON. 12mo, cloth, 288 pages. Price, 75 cents.

THIS volume includes material for the elementary study of Carlyle in his earliest and most fruitful period. It contains the Essays on Burns, on History, on Boswell's Life of Johnson, and selections from Heroes and Hero-Worship (the Introduction; the Hero as Poet — Dante, Shakespeare; and the Hero as Man of Letters — Johnson, Rousseau, Burns).

## ENGLISH

### An Old English Grammar and Exercise Book

With Inflections, Syntax, Selections for Reading, and Glossary. By C. ALPHONSO SMITH, Ph.D., Professor of English in the University of Virginia. 12mo, cloth, 201 pages. Price, \$1.00.

**T**HIS book is designed to meet the needs of those teachers who wish a brief and simplified text-book in Anglo-Saxon. It will enable the student to read any of the dialects of the Old English period, and will also serve as a foundation for the study of Modern English, of historical English grammar, and of the principles of English etymology. Emphasis is constantly put upon Modern English equivalents, the student being thus led at every step to compare the words, inflections, and syntax of Old English with those of Modern English.

The book begins with a brief History of the Language, followed by Sounds, Inflections, and Syntax. The exercises will furnish all the drill necessary to enable the student to retain the forms and constructions given in the various chapters.

The Selections for Reading which follow the grammar contain The Battle of Ashdown from the Chronicle; A Prayer of King Alfred; The Voyages of Ohthere and Wulfstan; The Story of Cædmon; Alfred's Preface to the Pastoral Care.

There is a chapter on Anglo-Saxon Poetry, followed by extracts from Beowulf and The Wanderer.

### Introduction to Theme-Writing

By J. B. FLETCHER, of Harvard University, and the late Professor GEORGE R. CARPENTER. 16mo, cloth, 143 pages. Price, 60 cents.

**T**HIS is a text-book for students who have completed the introductory course in rhetoric usually prescribed at the beginning of the freshman year. It is founded on lectures delivered by Mr. Fletcher at Harvard in 1893. The chapters are on Letter-Writing, Description, Narration, Criticism, Exposition, and Argument.

## A Text-Book for the Study of Poetry

By Rev. F. M. Connell, S.J., of the Novitiate of St. Andrew-on-Hudson, Poughkeepsie, N.Y.

THE purpose of this book is to set forth the fundamental principles of criticism from which can be formed an estimate of acknowledged poetry. The various forms of poetic expression are discussed and illustrated by numerous well-chosen selections. The book is for use in advanced classes.

## Principles of Success in Literature

By GEORGE HENRY LEWES. Edited with Introduction and Notes by Professor FRED N. SCOTT. 12mo, 163 pages. Price, 50 cents.

THE object of reprinting this admirable little treatise on literature is to make it available for classes in rhetoric and literary criticism. Scarcely any other work will be found so thoroughly sound in principles, and so suggestive and inspiring.

The value of the present edition is greatly increased by the excellent introduction by Professor Scott, and by a full index.

## Spencer's Philosophy of Style and Wright's Essay on Style

Edited by Professor FRED N. SCOTT, of the University of Michigan. 12mo, 92 pages. Price, 45 cents.

THE plan has been followed of providing a biographical and critical introduction, an index, and a few notes. In the belief that the Philosophy of Style can best be understood in connection with the Spencerian philosophy as a whole, the Introduction has been made largely bibliographical. There are Appendices giving a criticism of Spencer's theory of the effect of rhythmical structure from Gurney's Power of Sound, and an extract from Spencer's First Principles touching the evolution of literature.

### Select Essays of Macaulay

Edited by SAMUEL THURBER, of the Girls' High School, Boston.  
12mo, cloth, 219 pages. Price, 70 cents.

THIS selection comprises the essays on Milton, Bunyan, Johnson, Goldsmith, and Madame D'Arblay, thus giving illustrations both of Macaulay's earlier and of his later style.

The notes are intended to help the pupil to help himself. When an allusion is not easily understood, a note briefly explains it, or at least indicates where an explanation may be found. In other cases the pupil is expected to rely on his own efforts, and on such assistance as his teacher may think it wise to give.

### Historical Essays of Macaulay

Edited by SAMUEL THURBER. 12mo, cloth, 399 pages. Price, 80 cents.

THIS selection includes the essays on Lord Clive, Warren Hastings, and both the essays on the Earl of Chatham. The text in each case is given entire. A map of India, giving the location of places named in the essays, is included.

These essays are annotated on the same principle that is followed in the notes to the Select Essays.

### Select Essays of Addison

With Macaulay's Essay on Addison. Edited by SAMUEL THURBER.  
12mo, cloth, 340 pages. Price, 80 cents.

THE editor has aimed to bring together such papers from the *Spectator*, the *Tatler*, the *Guardian*, and the *Freeholder* as will prove most readable to youth of high school age, and at the same time give something like an adequate idea of the richness of Addison's vein. The *De Coverley Papers* are of course included. There are seventy selections in all. They have to do with the Spectator Club, the Stage, Manners, Politics, Morals, and Religion. There are selections from Addison's Stories and his Hymns. The book contains also Macaulay's Essay on Addison.
